BUFFALO AND TONAWANDA, N.Y.

TONAWANDA, N.Y., Oct. 31. The season is coming to a close here with dullness marking trade. Throughout the entire month business has dragged. A fair demand exists for pine, but generally shipments of any size are unknown. Prices do not change, and this is the most favorable feature of the month.

ALBANY, N.Y.

ALBANY, N.Y., Oct. 31.—Trade has not nearly equalled expectations for this season of the year. Shipments in place of being lively, as they usually are towards close of navigation, are slow. Reports from salesmen on the road do not possess much encouragement.

SAGINAW, MICH.

SAGINAW, Mich., Oct. 31.—The hoped-for, and with some, predicted revival of trade, so soon as the silver question was settled, has not reached this centre. The season will mark one of the dullest for years. Lumber does not move, and the plans for the winter's work are on an extremely limited scale.

NEW YORK CITY.

NEW YORK, Oct. 31.—Trade is of an uncertain and indifferent character. There are spurts now and again, but no large volume of business is doing. The New York Lumber Trade Journal says: "Dealers are renewing customer's paper right and left, and conditions are not at all favorable at the present time for a good winter's trade. Nothing is in demand except for immediate wants, and it would be ridiculous to say to the contrary."

DONT.

ONE of the most common, and at the same time greatest abuses of the boiler, is the reckless practice of blowing out the boiler as soon as the fires are hauled, and the boiler still hot. Under such circumstances the contraction of the fire-sheet, tube-sheet and tubes is so unequal and rapid that in the end it results in the ruin of the boiler.

LEADS THE WORLD.

THE Magnolia Metal Company, having offices at New York, Chicago, London and all over the world, has been allotted the highest award possible at the World's Fair, Chicago, on their Magnolia Metal. A medal has been granted and a diploma with following specifications allowed and set forth:

1—It prevents hot boxes. 2—It will not cut or heat journals. 3—Its lasting qualities are of the highest order. 4—It is a self-lubricating metal, saving large percentage of oil. 5—It increases the motive power. 6—It is the only metal that protects and does not wear journals. It enamels them. 7—It is adapted to high and low speed machinery. 8—It will stand the heavy work of sugar, rolling, saw and wire mills. 9—It is a success for main journal and crank-pin bearings; also, gills of steamships and steam tugs. 10—It is the best water metal.

WELL ORGANIZED.

LONDON has long been the monetary centre of Western Ontario. Its loan companies control more capital than those of any other city in Canada except Toronto, while all the chartered banks in London reap good results. The latest enterprise established here, with its head office at the Masonic Temple, is the Steam Boiler Inspection and Plate Glass Insurance Company. Already it is acquiring a snug and thriving business. Its board of directors are well-known business men, E. Jones Parke, Q.C., being president; F. A. Fitzgerald, president of the Imperial Oil Company, is vice-president, and Hon. David Mills, Q.C., M.P., ex-Minister of the Interior, Mr. John Morrison, ex-governor of the British America Insurance Company of Toronto, and Mr. T. H. Pardon, barrister, of London, are the directors. The services of Mr. J. H. Killey, of Hamilton, have been secured as consulting engineer, and it will be welcome news to the citizens generally to know that Mr. John Fairgrieve returns to London as its inspector. The management is in the energetic hands of Mr. James Laut, and the Advertiser predicts a successful career, under his oversight, for London's latest enterprise.—London Advertiser.
