

WORMS—Can always be cured by Neligan's English Worm Candy. If the bowels are not moved enough by it, a small dose of these Pills can be given afterwards, and no worms can exist.

FOR FEMALES—These pills are particularly suited, as they gently bring away all bad humor, cool the blood, and renovate the strength.

DOSE.—Two to four.

 No Mercury contained in these Pills; they are all vegetable.

ROBERT STARK, WOODSTOCK,

Is sole agent in Canada for these Pills. By him all boxes of Pills sold in Canada must be signed thus :

Robert Stark.

Prepared by Dr. BARTEE, M.R.C.S.E., 275 New Bond Street, London, England. All orders for America must be sent to his Agent, Mr. Robert Stark, Woodstock, Canada.

TO DYE PINK.—For every three pounds of yarn or cloth take three and a half quarts of water, or enough to cover the articles you wish to color, two ounces of cochineal and half an ounce of cream of tartar; steep the cochineal in warm water two hours, or until the strength is entirely extracted, and add the cream of tartar; then wet the cloth in clear water. wring it out and put in the dye; bring it to a scalding heat; let it remain a few moments and it will be finished. If a lighter color is wanted, use less cochineal, if a darker one, more; the shade depending upon the quantity of cochineal used.

 A cheaper, yet handsome pink, may be obtained by substituting Nicwood for Madder, in the receipt for Madder Red.

TO DYE GREEN.—For every pound of yarn or cloth add three and a half ounces of alum and one pound of fustic; steep to get the strength, but not boil; soak the cloth until it acquires a good yellow color; then throw out the chips and add the indigo compound slowly, until you have the desired shade of green.

An ounce or more of the compound is required for the above quantity, varied according to the depth of shade.

 The receipt for preparing the compound above mentioned is a secret; therefore I will not warrant success where any other is used than that prepared and sold only at my store.

DOVE AND SLATE COLORS OF ALL SHADES—Are made by boiling in an iron vessel a teacupful of black tea with a teaspoonful of copperas and sufficient water; dilute this till you get the shade wanted.
