

Christ is the agency, or first germ animated, or the Only Begotten Agency through which this form of evolution proceeds from the mother being possessed with power within herself to propagate. If one almond from Aaron's rod or one orange from a tree has no seeds, that is the one the horticulturist selects his seven grafts from to propagate his seedless tomatoes or oranges, like the family of milke cows that have the horns bred off them. This is where the top story of Noah's three-storied ark gives Barlank escape by tearing off the roof for a hole of escape. Then he gets down on the ground and grafts the olive branch the dove brought him through the window into the wild olive branch, and so produces this very useful bunch or seedless offspring from the top and bottom stories of nature's laws. God closed the door of Noah's ark in the lower story when he shut Adam out of Eden and under the laws of magnetic gravitation like our boy that stood between the two wires with the positive ends of the magnetic needle both pointing to the child from the third generation. To follow Christ's genealogy back through the female side of the house by way of the harlot Rahab and mother Eve, we must throw a negative wire charged to attract the negative end of our magnetic needle. Then if these women had been given power within themselves to reproduce as Christ's mother had, we would only have needed the first Adam's rib on the earth and the second Adam, Christ, from heaven to propagate social evolution through the social evolution of the Suffragette. This would eliminate the third ray of radium. God's kingdom, to correspond, would be brought down to Christ in the second story of Noah's ark. The skeleton pattern like the radium formula would not fit into the water formula H_2O , or into its crystallized form with three diameters in our snowflake or angel's measuring reed that corresponds to man's measures.

To place God in the everlasting spirit realm and then materialize Him on the throne, A, in Eden would materialize God to earthly forms or semi-material forms. The child taught that ice cream is frozen milk sees the milk forming in drops like water, and knowing the snowflake form of equilibrium in his apple cutting sphere and knows how the three diameters shortened forms the cube by putting the fourth part, salt, into it and extracting the water. If he has been told of Joseph's interpretation of the butler's and baker's dreams he sees the birds eating up the bread on the third day and the butler delivering the fourth part of the vine (wine squeezed out), and knows God is going to judge us and reward us like Pharaoh did the wicked baker and the good cup-bearer. But again, his mind reviews his vision beyond the Pyramids, where his grandfather, Adam, walked and talked with God. He has been taught how to bring in the corner stars to the 6 points of David's shield and still leave them 60° apart, while the middle cross star reminds him of God's covenant of Salt and the centre of his school globe along with the dressing of doll babies and placing them in the cave of salt for Lot's girls. If the ice reminded him of reading about frozen meat in northern Siberia, where it is found, he might have heard his teacher suggest this tropical meat and coal fields show that they were once near the equator. Whether the earth turned on a different axis suddenly at the time of Noah's flood or whether the north pole was directly facing the sun all the while, we know not. Either might have
