It is a scientific compound of the essential elements that are lacking in the various foods upon which horses, cattle, hogs and sheep generally subsist. It produces flesh by compelling the system to do its best. It permits no food to pass off undigested. It wards off diseases. It is called a food for the want of a better name. It is not exactly a medicine, nor a substitute for hay and grain and other foods. It is both nutritious and curative.

It is not a stimulant, but a tonic. It aids the digestion, and thereby gets most muscle and fat and milk and wool out of the various foods that the horses and hogs and cows and sheep eat. If your dealer can't supply you, send your order to
