

6 FIVE-MINUTE SERMON.

PEACE * Peace be to you. " (3). John's Gospel xx

It was the evening of the first bright Easter day. The accounts of the rising from the dead of Him whom they had Stress the dead of Him whom they had Dasped should redeem Israel were being discussed, in that upper 'room where they had celebrated the Passover, by the disciples. Suddenly Jesus Him-self stoad in the midst of them and said to them: "Peace be to you." He who burst the bands of death, He who is the Aathor of life, came back to east the the same measure with which

carth with the same message with which He first came-the message of peace. The angels over the plains of Bethle new sang "Peace on earth to men of good will," but to day is heard that word of Peace of which theirs was but the fantest echo. When God, the unighty One, chants His prein of triamph, well may all created things be milent.

My brethren, our Blessed Lord has

for us a message of peace this day. For three years He went up and down the hills and vales of this native and, and His whole pilgrimage there essented but a warfare. Men scorned His teachings. They despised Him and His words. He died, and it seemed as if a great light had been esting-uished. But when He rose triumphone aished. Bat when He rose triumphant over death, when by His death He overcame him who had the power of death, then came vistory, and with victory came peace. Is this the case with your hearts to

is this the case with your hearts to-day, my dear brothren? Has our Lord, who perchance lay, as it were, dead in your soul-has He, I say, risen in you again? Are you in Him risen up to a mew and a better life this glorious Easter morning? It such be the case,

peace is yours. For six long weeks you have been preparing for this day. To this hour you have locked forward. Lent has been a preparation for it. You piously entered on the performance of certain daties which you took upon yourself. You engyed to battle in a special way with sin You have fought the battle mobiy, and with the sid of the Sacra ment yours is the victory, and Jesus mow stands in our midst. He is in your very breasts, and says: "Peace be to you."

What means this word? It means a wictory won in your hearts. It means that, having overcome, and being in a state of grace by co operating with the grace of God, you are now so strong that you can say: "I never will, with the help of God, commit mortal sin again." It means that you have the again." It means that you have the power to live new lives. So put into continual practice those means which you found so helpful in Lent. Did you pray regularly in that time? Do not leave of the practice now. Did you receive the Sacraments often then? Why not keep on in the same good smakew?

Sustom ? Ahl so many people when Lent is over rain all the good they gained by leaving it all behind them. Bat the person who will put into practice all the good deeds, all the prayers and devotions, which he used in Lent for the rest of his days, he is the one who may be said to have obtained the great and inestimable gift of peace-our Lord's benediction on Easter Day. Neither is peace exactly the same

thing that we mean when we speak of a peace being concluded between two astions who have been at war. We are still at war with sin. There

is no truce, there can be no truce with There is not and there never can are any cessation of hostilities. It is mothing else, then, than the firm purpose of amendment of life, put into daily practice, by efficaciously using the spiritual weapons which Jesus Obrist in His mercy so lovingly pro-

wides for you. Benot discouraged then, though you have yet to fight and wage war. Peace is yours, because He is on your reame and

FERTILIZERS. Another way of keeping up the sup ply of food is the use of fertilizers, such as common ashure, guano, nitrate of soda, etc. The cost of these ferti lizers is a considerable drain on the farmer, who is normally in a condition of stringency in regard to ready money. The value of fertilizers lies in their containing nitrogen and their being able to supply it in an available form

to the growing plant. ATMOSPHERIC NITROGEN.

ATMOSPHERIC NITROGEN. The plant absolutely requires nitro-gen, but why should the farmer be put to the necessity of purchasing it in the shape of expensive fertilizers, when it forms four fiths of common air. On every acre there lies thirty seven thousand six hundred and thirty five tons of this valuable gas! Why then cannot the plant drink in through its million months this vital fluid which encompasses it all around ? No one encompasses it all around? No one can tell why; all we know is that the common green plant cannot assimilate nimogen in the gaseous form. Hay may contain all the essential elements of human ford, still, in the case of a man a diet of hay would have an un-satisfactory outcome. Because green leasts cannot abact gasen sittogram.

plants cannot absorb gaseous nitrogen, farmers have to administer it in the shape of expensive fertilizers. CALCIUM CYANAMIDE.

So expensive indeed are these, that the anxious farmer will hear with plea sure that the Niagara electric furnace sure that the Niggara electric furnace has succeeded in capturing the atmo-spheric nitrogen and confining it in calcium cyanamide which may turn out to be a cheap and effective fertili-zer. But also for our vanity, this splendid achievement of the electric furnace has been forestalled by the humble work of the soil bacteria, farmer's little friends. Here is the

story from the beginning. FERTILIZING ACTION OF CLOVER.

The fertilizing value of a crop of clover, or of any other legume, such as bean, pea, etc., has always been recognized. In the days of the Rorecognized. In the usys of the hose mans, according to Piny, it was known that to take a crop of clover off a vine-yard was equivalent to manuring the vineyard, the crop left the soil richer rather than poorer. This seeming paradox has been explained only witha score of years, and here is the explanation.

THE SECRET. If the roots of a clover plant be ex-amined, there will be found upon them a number of small nodules. Upon further examination these are found to be made up of nitrogenous matter, and to be filled with millions of bacteria. It is a case of infection brought on naturally, or artificially by the farmer. HELPFUL FRIENDS NOT PARASITES.

It is a disease, but a most beneficial disease, if I may say so, for comparison shows that the clover plants, which are nost abundantly provided with these nodules, are the healthiest and the most prosperous. These bacteria are not gna wing parasites, they are profit able and well paying roomers. Like the mushrooms and fungi, they have the wonderful power of extracting directly from the air its nitrogen com ponent and of storing it up in the soil, so that a crop of clover from seed properly infected at a nominal expendi ture of money and trouble, will do as much good to an acre of land as eight hundred to a thousand pounds of nitr . of soda at a cost of \$25 ! This is good news for the farmer who puts up with poor crops for lack of capital to pur-chase fortilizers, and it doss away with all excuse for the "worked out" farr.

SPEED THE PLOUGH. Last year the farmers of three of our North-West provinces produced \$125 -000,000, and those of the United States near six times as much. On this scale, again of five bushels an acre is an enormous increase in the country' assets and when we remember that this

assets and when we remember that this wealth is not a profit at the expense of someone else, but that it is an actual creation of values, we ought to be con-vinced of the national economic import. ance of agriculture, and of the wisdom When Mr. Andrew Hunter advances vinced of the national economic import-ance of agriculture, and of the wisdom

If their be one thing precious more than another among the historic relies bequeathed to us by the past, and without which the reconstruction of the map of Old Haronis would border on the impossible, it is Ducretz's inset mip, delective though it be in some of it, outlines. A shore emprying of it its out-lines. A proceeding of it, slightly enlarged, is given in the Ontario Archaeological Report for 1902 at p. 96; and an engraving, about the same size as the original, on page 56 of

Mr. Aadrew Hunter's monograph on Medonte. The names have not come

Medonte. The names have not come out well in the western portion, but are quite distinct in the eastern, to gether with the outlines, which is all we need for our present purpose. A g'auce at either will show us, to wards the west, "S. Maria" (The Old Fort), on what is now Mud Lake, and a stream, the modern Wye, drain ing into it the waters of two lakes, Cranberry and Ocr's. To the east of this stream are tures others, bearing at oresect the names of Hozy. Surgeon

presect the names of Hogs, Surgeon and Coldwater. Thus far all charto graphers agree; but beyond this point, Mr. Hunter parts company with all those, who, to my knowledge have ever touched upon this subject. This he has a perfect right to do, for one solitary authority may bring forward more cogent reasons to support his opinions than a host of others taken singly or collectively. Just as it is not the will of the majority which constitutes right, so also it is not the more word of the

many which constitutes trath either historical or otherwise. All depends upon the nature of the facts established and the validity of the inferences drawn.

Mr. Hunter's contention is that the

Mr. Hunter's contaction is that the fourth stream, in the order above fol-lowed, is the North River, and that the lake it drains, as marked on Dac-reux's map is Bass Lake, while Lake Conchiching is omitted. Those with whom he does not agree hold that on Ducreux's map the Nor h River and Bass Lake are ignored, and that the smaller lake, lying north of "Lacus Ocentaronius" (Lake Simcoe), is Lake Conchiching, while the river draining it is no other than the Severn. They it is no other than the Severn. They oreover hold that if the Narrows are not marked it was owing either to an oversight of the engraver, or because, if marked, it would blur the lettering f "S. I. Baptista," which extends aquarely across the neck of land be-tenen the two letters. tween the two lakes.

> THE CONTRADICTORY "EVIDENTS." It is not an easy matter to prove

what seems plain enough to be self-evident, for one is puzzled how to flud anything more convincing than the mere inspection or consideration of the thing itself. And it is much the same in the present case where one would naturally suppose that a mere tyro in

Lake, and the river that drains it, the Severn. But when one is confronted

vicinity of this lake are many remains o Heron vi lages Martin and Taobe identity St. Jean Beptiste Cabiague, but mistake Bass Luke and Nerth River (as indicated on Duor ux smap) for Luke Conchiching and the Severa. Bat the latter are several miles 'arthen east [o proof given. Fr. J]; the v.cinicy of those waters was less nabiable, from a Huron point of view ; and they do not correspond so well with the references in the text. [ao references vouchsafed, Fr. J.]" (Relations, Cleve-land Edit., Vol. 20, p. 305). There are seven more lines in the paragraph wherein Reguences is quoted as start ng that the Arendsenronnons were forced by the Longard is a bunden their country.

that the Arendsentonions were forced by the Iroquois to abandon their country and then this faal statement by Mr. Hunter appears: "One of their vil lages in the vicinity of Biss Lake even shows indications, in its rensins, of having been stated." And this is Mr. Anders Henter

lake on Dacreux's map as Biss Lake, referred to with his wonted self-suffi itent assurance in more than one passage of his writings: Simmered down it amounts to this: "I say that it evi dently is the one now called Bass Lake; denty is the one now carrie base base, I say that Lake Conchiching and the Seven are several miles farther east than the river and lake set down by Ducreux ; and that they do not correspond so well with the refer nces in spond so well with the refer nees in the text; it is superflauous to go to the trouble of presenting any proof, you have my word for it." Which word, no doabt, Mr. Hunter considers "evid-ence, at first hand." In spite of the reverential awe due to Mr. Andrew Hunter's angust personality, I mos emp atically deny every one of these

ansupported assortions. Luckily our "conpetent person," never attempts to develop, I do not say prove, a proposition without in the very act, hopelessly compromising the thesis act, hopelessly compromising the thesis ne intends to uphold. What did we read just now: "I identified, [we have seen now, Fr. J] Bass Lake with the small lake on Daureux's map, which may have been confused with Lake Couchiching. The small lake mention-ed in Champlain's narrative as lying near Cahisarté also becomes identical near Cahiagté also becomes identical with Bass L ke." Monograph on Oro, p. 10.) Does it indeed? And by the

sime process? Let us .ee. THE EXPERT'S "EVIDENT." A GEOGRAPH ICAL ABSURDITY

If ever Mr. Andrew Hinter made an nepardonable blunder, for a "compet et person.' you have it here richly set in the sort phrase of his, jast quoted. It is a gom of the first water, and commands our wondering admira tion. Wa does Champlain say? Oa August 17, I arrived at Cahiagoé (Liverdiere's "Oavres de Champlain" map reading, would even at first sight (Liverdiere's "Osavres de Champlain" pronounce the lake, lying north of Quebec, 1870 Vol. 4, lower pagination, "Lacus Ouentaroniu"," Conchishing 520) At this village Champlain took up his quarters and tarried to give time to the Haron warriors to assemble. He continues: "We left the village on

too, will conquer. What care you for such battles when Christ Himself fights for you? Your souls are in peace, for He is dwelling in you. Such, my dear broth on, is the gift of peace which our Divine Redeemer bestows upon you this Easter morning. And I can wish you no greater happiness than that when soon or late, He may stand in your midst, your ears may rejoice to hear those bleased words-" Peace be to YOE.

THE FARMER'S LITTLE FRIENDS.

Written for The Casket

My Rev, I. J. Kavanagh S. J. M. A. B Sc. Loyola College, Montreal.

They are small indeed, these minute willies of the agriculturist, a thousand of them would have ample promenading moom on a pinhead, but, in their myriads, they make the difference be-tween big harvests and bad ones. They are of the great but not very well or very favorably known family of the bacteria, which we, in our self sufficiency class among the lower forms of vegetable life.

SOIL MARING.

In large measure, they are the soil makers, helping out the weathering and chemical actions, breaking down the minerals into substances the plants need and can assimilate, enriching the soil by inducing decomposition of the organic matters in it and also, through ranic matters in it and also, through power they share with none, by cap ring the nitrogen of the sir. This it is time that the elergy of the United st most marvellous and beneficent tion is the main topic of these re-Suring the nitrogen of the air. This last most marvellous and beneficent metion is the main topic of these re me se k.e.

SOIL IMPOVERISHMENT.

It is clear that continuous cropping thends to impoverish the land, the soil means, and is the poorer by the amount and mature of its contribution. If it ret a rest it will recuperate : or, since different crops require different feeding aud therefore draw upon the soil differently, it may be that a judicious rotatheir of crops will enable the soil to their their their their the loss by collecting in the to be imperval between two similar harvests, the specific food elements this crop rea uires.

of a liberal expenditure of public monies on the scientific investigation of agricultural problems. Therefore the investigation of such a question as soil bacteriology is a matter of national importance, as is also the production of plant varieties ficted to local conditions. The work is beyond the resour-ces of the individual farmer. The United States Agricultural Department has studied this question, while in Outario the Agricultural College at Guelph has done most effective work along these lines. The soil constitutes the one great and inexhaustible natural resource; from among the men who till it, there come, as a rule, our best citizens both mentally and physically, and therefore it is the part of a wise and practical Government to foster agriculture in every way and to see that the farmer meet with opportune help and fitting reward in the exercise

A HINT FOR CATHOLIC READERS.

of his important function.

"It is certain," says the Catholic Universe, "that whatever books Ca h olics wish to read will and must be placed in public libraries. The most conspicuous characteristic of Catholic books at present to be found in the libraries is the virgin whiteness and uncut freshness of their pages. Catholics form a large reading public, but not a Catholic reading public, and our to cater to the laity. So far the bulk of the issue from Catholic presses has

been in the line of juvenile fiction and manuals of theology. And this is not the fault of the publishers. Like the librarians, they are only too glad to supply what is demanded. It is hardly to be expected of them that they will publish books for the plenishing of their stockrooms or the adornment of their catalogues. In their eagerness to be 'broad,' Catholics should aim to cultivate a taste at least Catholic enough to read their own literature. -Sacred Heart Review.

a statement or makes a declaration un supported by proof, which not in frequently hoppens, it can legitimately or comference, emptying into the small be met with a flat denial: quod gratis asseritur gratis negatur. On page 10, in his Monograph on Oro, Mr. Hunter gravely informs us: "In the Barrows, leaving only a Re issue of the Jesuit Relations, vol. 20, p. 305, I identified Bass Lake with the small lake on Dorosury man which all met with a flat denial : quod gratis | one at a place where the taking of the the small lake on Ducreux's map, which may have been confused with Lake Conchiching. The small lake men-tioned in Champlain's narrative as lving near Cahiague also becomes

identical with Bass Lake.

MR. ANDREW HUNTER " IDENTIFIES. When a serious author states that he has identified a place, or geographical feature hitherto indeterminate, a serious reader takes him to mean, n that he himself pronounces the thing evident, but that he makes good the identification by conclusive proofs, especially when his new theory is sub-

versive of what has previously received as exclusively correct. Mr. Hunter has a different way of appreciat-ing his own merit, and thinks it amply

sufficient that he should so far conde cend to assure the reader that it is as he says, that is, evident. That I am in nowise exaggerating or misstating the case, let us see what Mr. Hunter ad vances in the reference given, to justify the statement that he has identified smaller lake on Ducreux's map with Bass Lake.
