

An Up-to-Date Cautery Apparatus

For Use
With
Alter-
nating
Current

The McIntosh Cautery Converter possesses many unique features not found in other instruments. It delivers a cautery current of large volume under perfect control, while a finely graduated rheostat provides absolute regulation of diagnostic lamps — entirely independent of the cautery circuit. A special adjustment to suit the voltage of supply current and a convenient cut-off switch are also among its numerous points of merit. It can be connected with any alternating current of 55, 110 or 220 volt pressure. **The quality and the price will appeal to you. We are headquarters for Everything Electro-Therapeutical.**
