What these Contractors Say Regarding THE "SMITH" CONCRETE MIXER

5130 Cubic Yards in 54 Hours

Ottawa., May 21st. 1912.

Messrs.

Mussens Limited,
Montreal, P.Q.

Gentlemen :-

In Ottawa during a six days run, with three Smith Mixers operating, we placed on an average of 285 cubic yards of concrete a day with each Mixer, or 31.7 yards per hour per Mixer.

We consider this an excellent record, one to be proud of, as there were intervals during the six days that we were unable to keep all Mixers operating.

This work was under the supervision of the Government Inspector who can verify the above statement.
