Emmanuel Weber, President

A fully portable spa that assembles on site is available from E-Man Products. The basic construction of the product is a wall system consisting of four preconstructed walls. Each wall has an extruded aluminum frame that is anodized. Within the wall's framework, all plumbing and jets are pre-plumbed and the wall is completed with urethane insulation to reduce heat loss. The exterior of each wall is finished with a wood panel.

The walls fasten together through a series of unique slider connectors. Plumbing connections line-up automatically and connect with "O" ring seating, internally. Electrical bonding is connected on all four corners.

Inner sheeting make-up the inside walls and two inch styrofoam SM is used as an inside floor base. The spa interior is finished with a 30 mil vinyl liner fastened into a liner retainer at the top of the spa wall.

The spa pack is connected outside the wall with "O" ring unions.

E-Man Spas come in two sizes. The large portable is 5 feet by 6 feet 6 inches (1.52 m by 1.98 m) inside measurement with a capacity of six to eight adults, and the small portable is 4 feet by 5 feet (1.219 m by 1.52 m) inside measurement with a capacity of four to six people. Both models are 32 inches (81.3 cm) in depth.

This product is ideal for use in apartments.

Enersol Products Inc.

#14 - 1080 Tristar Drive
Mississauga, Ontario

Main Export Contact:
Keith Simmons, Manager

Enersol Products is a manufacturer of solar collector panels for swimming pool applications and operates its plant in Mississauga, Ontario.

The S-1200 solar panel that the company manufactures is designed for durability and efficiency. The panel absorbers are made of specially formulated EPDM synthetic rubber that has no scaling, rust or cracking, and unlike the extruded plastic solar collectors, is resistant to prolonged exposure to sun, weather, heat, ozone, steam and physical abuse.

The S-1200 unit will fit any roof and the 13 inch (32.5 cm) modular headers and EPDM flexible rubber means greater coverage on small roofs that have annoying roof pipes or other projections. A simple clip and "O" ring configuration makes installation and service an easy proposition. The 13 inch modular header and easily spliced collector tubes eliminate expensive service.

Enersol Products presently services Canada and dealers in the Florida markets.

Equator Pool Products Inc.

25 Addington Square
Unionville, Ontario
Canada L3R 7N3
Telephone: (416) 479-2329
Main Export Contact:
Gunter Stefan, President

Equator Pool Products was incorporated in 1985 to manufacture recirculation systems for swimming pools. The company produces a high quality, low cost product line for inground liner pools. Its skimmer package consists of one skimmer, one main drain and two return fittings. The products are also available as individual items.

The skimmer includes a patented Vacuum/Control Plate, with optional extras of a Grout Ring Spacer Extension and a Skimmer Support Channel. The panel cut-out, for the Skimmer, is the same as a major suppliers' product. The Main Drain comes with a 1/2 inch plug, and can be fitted with a patented Hydro Relief Valve and Collection Tube. The two Return Fittings feature

spring loaded Directional Balls with interchangeable orifices. The entire package was designed by an engineer with 20 years of experience in swimming pool products. The line is manufactured out of high impact strength injection moulded plastic.

Equator has offices and warehousing in Toronto, Ontario and presently exports to U.S. markets.
