

3. Reassess the viability and implications of Canada's commitment to the "net" approach. The implications of increasing forest fires is that Canada's emissions inventory and obligations could skyrocket uncontrollably. Methodological issues related to forest inventories and the use of the "net" approach, as well as the issue of allocating emissions for electricity trading are on the agenda for the December meeting of the SBI. Canada must work now to prepare its own analysis and develop policy positions.
