

ROSSLAND BUSINESS DIRECTORY

Classified List of Individuals and Firms - A Town Where Business Men Don't Complain of Hard Times.

The merchants of Rossland are all well pleased with the business they are doing. It is reported that nearly every one of them is getting on very well, and that the business is very good. The hotelkeepers are all making money, and so are the restaurateurs. The hardware stores turn over a lot of merchandise daily, and at a big profit. One general store, which deals largely in hardware and building supplies, is said to take in \$30 a day. The activity that characterizes the place at all hours of the day was seen to justify this statement. The mining stores of the town are well equipped and doing a satisfactory business. There are two large furniture stores in Rossland. There is a great demand for ordinary household furniture. All such is sold as soon as it is received in stock. The miners are bringing in their families from day to day, and the furnishing of houses to receive them causes the furniture trade to boom. Many of the men will not bring in their families till next spring, when it is anticipated there will be a marked demand for furniture, fire and house furnishings. The two or three second-hand stores that carry on business turn over all the second-hand material that comes to them in very short order. Builders and carpenters are, of course, busy, but there seems to be sufficient mechanics in the place to supply the demand. The carpenter who has been used to fine work is not appreciated in Rossland. The man that is wanted is one who can slash and put up boards by thumb rule. Furniture, groceries, fruit and almost all kinds of bulky goods are from 20 to 100 per cent. higher in price in Rossland than in Toronto. Freight is the big item that increases the cost price of all merchandise. In addition to high freight rates, most of the provisions consumed in Rossland have to pay duty, as the bulk of it comes from Spokane and other points in the United States. Hay is \$25 a ton. Oats sell at 10 cents. Feed of all kinds, including maple, sell for five cents a pound. The hotels charge from \$2 to \$2.50 per day. Single rooms can be had from \$3.50 to \$7. Some from \$10. Board from \$5 upwards. Rossland has an opera house and quite a number of dramatic and scenic entertainments given from time to time by the companies that pass through Spokane on their way to and from the coast cities. Electric lights are generally used throughout the business section. Up to date, however, the service has been unsatisfactory on account of the limited plant of the company. A new power house is now in course of construction, and new machinery is being installed. Within a month or two the town will have an ample supply of electricity for all purposes. Incandescent lighting costs \$1 per light per month. In the list below will be found the names

VISIT TO THE JULIE

The World's Commission Sees the Mine - Prospect Sheet Makes a Good Showing at a Depth of 84 Feet.

Rossland, B.C., Oct. 7.-(Special to The World, via Spokane, Wash.)-With Mr. E. Morrow, manager of the Julie, yesterday I visited that much-talked-of claim. The Julie is situated just a mile from Port Shephard Railway, four miles from the Trail smelter, and on the Columbia and Western Railway. The Julie is a 22-acre company consisting of a full claim of 22 acres, located on the steep western side of Red Mountain, so called, on which the richest mines of the district are located. The claim is marked by heavy iron capping similar in every respect to that of Rossland's big mines. On the south ledge a prospect shaft is being sunk and the dip of the showing is very good. The rock, a syenitic diorite with a species of mica, is heavily stained with iron oxide, indicating that the mineral vein is of considerable value. There is a continuous mass of decomposed quartz on the surface which carries considerable quantities of gold. An assay made to-day gives \$3 in gold to the ton, while assays from \$25 to \$50 from the bottom of the shaft give \$3 to the ton, which must be regarded as an extremely favorable from the slight depth. The shaft is to be sunk until the dip or inclination of the vein is established, when a tunnel will be driven into the side of the mountain following the vein as deep as will be gained safely. In this work a moderate expenditure should result in the discovery of a rich mine. The Julie is to be an exception to the rule of the camp, the ledge on which work is now being carried on will contain considerable quantities of gold. There is a wagon road to the smelter, and one can be shipped by railway or horse ton to the smelter at least that of Rossland in the immediate vicinity of Rossland. The showing of the property is such as to justify vigorous development work, and the opinion of Mr. Moyraban, ex-Supt. of the Le Roi, who examined the property, is that the Julie is a better proposition than a great many properties for which more is claimed. The miners' quarters have been removed to the new property, and where a present shaft is being sunk, work will be carried on all winter. Muggump is now being run in demand. The Mining Review, in its market report to-day, says: "The strike of ore in the Muggump has improved the market for this stock, and when the public realizes the bona fides of the discovery a substantial rise is certain."

REDEMPTION

Recent Strike on the Red Mountain Proves a Record Breaker.

ASSAYS AVERAGE \$35

The Ore Was Sampled at a Depth of Only Five Feet, and Runs Well in Silver and Gold.

THE RED MOUNTAIN

Considerable excitement was aroused when the fact became known that the Eldorado, one of the best of the Big Three properties, had practically no ground. It appears that the Mascot, a prior location, when it came to be surveyed, took in nearly all the ground supposed to be included in the Eldorado. Fortunately the chief promoters of the Big Three also owned the Mascot, and in order to keep faith with the purchasers of Big Three stock, they have arranged to let the Mascot to the Big Three Company. This puts the Big Three in a better position than ever before, as the Mascot is a decidedly better claim than the old Eldorado. Superintendent Williams put \$20,000 cash for the claim only a few days ago. Up on the slope of Red Mountain above the well-known Cliff Mine are situated the Snow Shoe and
