

Important Notice . . .
to the Medical Profession

THE AUER LIGHT has been brought into use with most satisfactory results for **special examination of the throat, etc.** Used with the Mackenzie Concentrator, it far surpasses any other light. It is an Incandescent Gas Light, using gas in such a way as to give more than six times as much light as with ordinary burners, and is composed of a metal oxide mantle, suspended over the flame of a Bunsen burner, the heat of which instantly brings the mantle to a state of incandescence.

Less heat than ordinary gas.

Perfect combustion—no smoke nor soot.

Perfectly steady—no flickering.

Colors can readily be distinguished by it. It consumes not more than three cubic feet of gas per hour. Any ordinary gas jet consumes from five to eight cubic feet per hour. Helpful to the eyesight, and endorsed by physicians.

Over 50,000 now in use in Canada, and daily increasing.
