Figure 1.	Index showing location of Franklin map-area	2
" 2.	Franklin intermontane trough	18
" 3.	Diagram showing post-mature Pliocene upland restored	20
" 4.	Diagram showing relative amounts of erosion before and after uplift	35
" 5.	Jointing in Jurassic granodiorite	57
" 6.	Normal fault with small throw, below post-Oligocene erosion surface	64
" 7.	Illustrative of character of sedimentation in portion of Kettle River formation	70
" 8.	Character of jointing at border of early Tertiary rhyolite porphyry remnant	72
" 9.	Faulted aplite dyke in monzonite	75
" 10.	Endogenous inclusions of shonkinite-pyroxenite within augite syenite	79
" 11.	Contact between alkalic syenite and Franklin group altered tuff	81
" 12.	Crenulation in Kettle River banded chert near augite syenite contact	82
" 13.	Restoration of Tenderloin volcanic vent	87
" 14. A:	Contact of late Miocene minette dyke with early Tertiary rhyolite porphyry	90
	B: Contact between late Miocene pulaskite porphyry and Jurassic granodiorite	90
	C: Contact between late Miocene pulaskite porphyry and early Miocene trachyte	90
	D: Contact between Franklin group altered eruptive and granodiorite	90
" 15.	Micro-sketches of skeletal crystals of melanite enclosing orthoclase	110
" 16.	Block diagram of McKinley mine in pocket
