Castoria is put up in one-size bottles only. It is not sold in bulk. Don't allow anyone to sell you anything else on the plea or promise that it is "just as good" and "will answer every purpose." See that you get C-A-S-T-O-R-I-A.

DRS. KENNEDY & KERGAN

No other Medical Firm in the world has the established reputation for curing **Men and Women** that Dr. K. & K. enjoy. Their **New Method Treatment**, discovered and perfected by these Eminent Specialists, has brought joy, happiness and comfort to thousands of homes. With 20 years' experience in the treatment of these diseases they can guarantee **Cure or No Pay—Emotions, Nervous Debility, Syphilis, Varicocele, Stricture, Gleet, Secret Discharges, Impotency, Sexual and Mental Weakness, Kidney and Bladder Diseases.** Their guarantees are backed by Bank Bonds.

MEN'S LIFE BLOOD

You may have secret drains through the urine—that's the reason you feel tired out in the morning. You are not rested, your kidneys ache, you feel despondent and have no ambition. Don't let your life blood be drained away. Dr. K. & K. guarantee to Cure or No Pay.

BLOOD POISON

Syphilis is the source of mankind. It may not be a crime to have it, for it may be inherited, but it is a crime to allow it to remain in the system. Like Father—like Son. Beware of Mercury and Potash treatment. Dr. K. & K. positively cure the worst cases or No Pay.

VARICOCELE & STRICTURE

The New Method Treatment cures these diseases safely and surely. No pain—no suffering—no detention from business. Don't risk operation and ruin your sexual organs. The stricture tissue is absorbed and no scar remains. Dr. K. & K. guarantee Cures.

Kidneys & Bladder

Don't neglect your kidneys. Your aching back tells the tale. Don't let Doctors experiment on you. Dr. K. & K. can cure you if you are not beyond human aid. They guarantee to Cure or No Pay.

CURES GUARANTEED. NO CURE NO PAY. Consultation Free. Books sent Free, (sealed). Write for Question Blank for Home Treatment. Everything Confidential.

DRS. KENNEDY & KERGAN, 148 SHELBY STREET, DETROIT, MICH.

Something About Binder Twine

Farmers who intend placing their orders for Binder Twine should not take any Twine unless they know something about its brand. There will be a great deal of cheap, rough Twine on the market this coming year, and farmers should bear in mind that they have no way of discovering this until they come to use it, when they are really too busy to have any mistakes rectified.

We are selling the well-known brand "Our Superior" that we have sold here for 3 years and which has given universal satisfaction. We guarantee that the twine will be the same this year as last, hence, farmers will be perfectly safe in ordering it.

Last year some dealers sold a so-called Superior Twine, but it was not the genuine article, as Our Superior Twine is made by the Plymouth Cordage Co., and every ticket on the ball bears their trade-mark on the back, viz., a sheaf of grain. No twine that has not this trade mark on the back of the ticket is genuine "Our Superior Twine."

Farmers, remember this and do not allow yourselves to be imposed on. We are now taking orders for Binder Twine and are guaranteeing the price against any decline or advance up till the time you take your twine home. Our aim has always been to give the farmers a good working twine, and we think that considering the quantity we sell, there is no firm in Canada who receive fewer complaints.

JOBSON GREW BALD.

AND HE DIDN'T AT ALL LIKE THAT STATE OF THINGS.

But He Afterward Admitted That He Preferred It to the Condition Resulting From the Injudicious Use of a So Called Hair Restorer.

The increasing bald spot on the top of Mr. Jobson's head has been worrying him a great deal during the past six months or so. When he bought his first bottle of hair restorer, he used it furiously, but Mrs. Jobson came upon him finally and caught him in the act of applying the queer looking liquid to the bald spot.

"Why, what in the world are you doing?" she asked him.

"Does it look to you as if I am trying to cure chills?" growled Mr. Jobson in reply, angry because she had found him out.

"Why," said Mrs. Jobson, seeing the label on the bottle standing on the bureau, "it's hair restorer."

"What did you think it was—Jobson's hair restorer?" inquired Mr. Jobson sarcastically, "or maybe you thought it was a tawny old Madeira?"

Your penetration, Mrs. Jobson, is occasionally so—

"But," interrupted Mrs. Jobson, "aren't you afraid that the stuff will be injurious? I have often heard that those so called hair restorers affect the minds of some people who use them, and—"

"Oh, you heard that, did you?" mumbled Mr. Jobson. "Well, why don't you take time by the forelock and ring up a coroner or so of metropolitan police? You might have me railroaded to some asylum, you know, and then you'd—"

"But don't you really think," cut in Mrs. Jobson again, "that if nature intended you to be a trifle bald any artistic means that you may take to—"

"I don't profess to be any confidential terms with nature as some folks I know, madam," broke in Mr. Jobson grandly. "Nature intended a whole lot of things that don't appear to come out in the cards. Nature intended, for example, that inquisitiveness should be abhorrent to the feminine mind, and I leave you to judge how nature has fallen down in that respect. There's a good deal of poppycock about this leaving things to nature at that. I think I have observed you apply a certain white powdery substance to your nose with a piece of cambric on different occasions, haven't I? Well, if this nature that you appear to be such chums with intended you to walk through the world with a shiny nose, why do you—"

"Oh," said Mrs. Jobson, "I was only thinking that I never heard of one of these hair restorers really causing the lost hair to grow out again, and—"

"Didn't, hey?" broke in Mr. Jobson. "Well, that's just one more of these little things that you haven't heard of. The man who recommended this hair restorer to me was as bald as an orange, he told me, when he started in to use the stuff, and he looked exactly like Father—well, the piano thumper's twin brother, so far as his mane is concerned, I mean. I'll bet you a nice new tumbler that inside of a week I'll have a thriving growth of hair on my head—bustling to maintain the same length. I don't!"

"Was the man who recommended it to you the man who was selling it?" inquired Mrs. Jobson.

"That's neither here nor there," replied Mr. Jobson, turning red. "It doesn't make any difference whether he was selling six watches or turkeys."

Mr. Jobson used the hair restorer religiously for two or three weeks, at the end of which period his bald spot was a trifle larger, if anything, and there wasn't even the sign of growing pinfeathers to comfort him.

So he abandoned that particular brand of hair restorer and brought home two bottles of another kind. He didn't show these to Mrs. Jobson, nor, in fact, did he make any further reference to the subject of hair restorers. He seemed to have a mania for trying different kinds of hair restorers. He sent for pamphlets on "The Cause and Cure of Baldness" and devoured them eagerly, and on the following day he would send for a couple of trial bottles of the preparation for the restoration of hirsute manufacture by the publisher of the pamphlet.

One night last week he brought home two bottles of a pale pink fluid.

"Well, I've got the real thing at last," he said to Mrs. Jobson. "It's recommended by about 50,000 formerly bald men throughout this country and Canada, and the testimonials are the most convincing literature I ever read in my life."

Mrs. Jobson made no reply, but she could not help regarding Mr. Jobson with a commiserating glance, which he caught and resented.

"Oh, you can grin all you're in a mind to," he said. "If you think there are 50,000 formerly bald men in this country who are deliberately writing themselves down liars over their own signatures, then I'd hate to have your opinion of human nature, that's all."

When Mr. Jobson was ready for bed that night, he uncorked one of the bottles and rubbed the stuff well into his bald spot for about 15 minutes. Then he turned out the gas and went to bed. Mrs. Jobson shook him awake with a cry of dismay along toward 7 o'clock on the following morning. She was pointing with a horrified expression to the top of his head.

"What the dickens is the matter?" asked Mr. Jobson, feeling of his bald spot.

"Look at the color of it!" gasped Mrs. Jobson.

Mr. Jobson hopped out of bed and raced over to his dressing room looking glass, where he saw that his bald spot was of a rich russet brown in color, as if it had been heavily painted with iodine. He growled something and rushed to the washbasin. In the spring apply 50 pounds of nitrate of soda, 100 pounds sulphate of potash and 200 pounds acidulated phosphate rock. This should be done in April, the bare places to be seeded with seeds of a variety of grasses. Keep the cattle off until the grass makes considerable growth.

A Pointer About Sheep.

Sheep will not thrive on all kinds of soil. Some breeds are very active and will thrive in large flocks, but the large mutton breeds require good pasturage, and will not give satisfactory results if compelled to work over large areas for all they get. All sheep should have dry soils. Foot rot will always occur in a flock that is kept constantly on wet lands.

LOADING HOGS

How the Work in the Lot May Be Made Easier.

Loading hogs is usually a disagreeable task. This job is greatly simplified where an elevated pen with a floor on a level with the wagon bed is available, but there are few farmers whose feed lots are thus arranged. The only way to load the porkers is with an improvised chute, which is always more or less of a nuisance.

A substantial chute with an inclined floor—the longer the floor the better, as the ascent will be less steep—is made of 4-inch fencing spiked to a frame of 2x4 inches with posts of 4x4 stuff. To add to the solidity of the affair, the 2x4 and

CHUTE FOR LOADING HOGS.

4x4 should be bolted together. The floor can be made of plank or rough lumber of any kind. It is necessary to nail cleats upon the floor to prevent the hogs from slipping. One end of the chute rests on the ground, while the other is on a level with the wagon bed floor. This chute should be made of as light material as stability will allow, for it is often convenient to change its location. The rest of the arrangement is two sections of slat fencing, to be used as wings. One end of each section is fastened to a side of the chute and unrolled. When set up the two wings will make a large V, of which the point is the chute. The hogs can be easily driven inside the V, thus the two ends of the slatting can be brought together. The hogs will thus be confined in a small pen to be loaded.

Keeping Up Soil Fertility.

The first thing in keeping up fertility is the saving and proper application of manure. Thousands of farmers are letting the manure waste in their barnyards, and are using commercial fertilizers. Fertility can be kept up in this way, but a lack of humus will soon follow. Soil deficient in humus will dry out in dry weather and a seeding of clover will be next to impossible. Do not flatter yourselves with the idea that you can keep up your fertility on commercial manures alone. You must save and use all your farm manure. Spread the manure on the higher portions of the field. Save everything. Do not let a thing go to waste, but put it on the land. It makes little difference when you put it on, only see that it goes on.

Plow under all the clover you can. Rye will do to plow under very well. Any green crop will answer. Do not let the ground lie bare during fall and winter. Save your corn stubble to plow under. This can be done at the last cultivation. It will not only save fertility by the roots taking up fertility and storing it in the plant, so as to be available for the next crop, but it will make excellent pasture for your sheep and hogs during the fall and far into the winter.

Do not hesitate to draw the manure as fast as made during the winter, and spread as fast as drawn. If your land is too hilly this may not be the best plan provided you have a good way to save the manure at the barn. But as the manure is usually kept around barns, the loss from washing down the hills will be no greater than the loss around the barns. Manure drawn out in winter saves that much from the spring's work. Often in the spring the ground is soft, and I have seen ground injured as much by tramping and cutting up by the wheels as the manure did good.

A wise rotation of crops is also necessary in keeping up fertility. No rotation should be longer than four years. Three years will be better. But four-year rotation will do very well provided clover is given an important place.

A Two-Story House.

Hens could often be kept in the second floor of a building, if access to the ground could be secured. The cut shows an easy grade up to an

runway to second story.

elevated door. The top and bottom levels are shown in place, but the entire front should be covered with slats. These can extend from the top board down to the bottom board. The grade is so easy that fowls will readily pass up or down. By this plan a building can often be made to hold two flocks instead of one.

To Improve Meadows.

Where meadows show indications of failing give an application of manure this winter, leaving it on the surface. In the spring apply 50 pounds of nitrate of soda, 100 pounds sulphate of potash and 200 pounds acidulated phosphate rock. This should be done in April, the bare places to be seeded with seeds of a variety of grasses. Keep the cattle off until the grass makes considerable growth.

A Pointer About Sheep.

Sheep will not thrive on all kinds of soil. Some breeds are very active and will thrive in large flocks, but the large mutton breeds require good pasturage, and will not give satisfactory results if compelled to work over large areas for all they get. All sheep should have dry soils. Foot rot will always occur in a flock that is kept constantly on wet lands.

Dizziness

Is a very common consequence of indigestion and torpid liver. Sometimes there are spots before the eyes and hot flashes. At other times a sensation as of vertigo occurs, at once suffocating and blinding. It is a waste of time to attempt to cure this condition by ordinary means or medicines. The stomach and organs of digestion must be restored to healthy activity, the blood must be purified, the liver cleansed and strengthened, before a cure can be hoped for. This is the work done by Dr. Pierce's Golden Medical Discovery, a medicine specially beneficial in diseases of the stomach, blood and liver. It strengthens the stomach, purifies the blood, cleanses the liver, and promotes the health of every organ of the body.

"My wife was greatly troubled with indigestion, torpid liver, dizziness, and also irregular periods," writes Mr. W. A. Preston, of Shunagah, Nantuxes Co., Minn. "We tried many different remedies, but none of them gave perfect relief until we were induced by a lady to try your Golden Medical Discovery. 'Favorite Prescription' and 'Pleasant Pellets.' These medicines did more good than anything we ever tried for these complaints. We have used four bottles of your 'Golden Medical Discovery,' one of 'Favorite Prescription,' and two vials of your 'Pellets.' These medicines have done the work we desired, and I do heartily recommend them to all similar sufferers."
