ASHES AS MANUER FOR GRASS LANDS .-There is scarcely any part of this country of asheries, abundance may generally be had. If the following remarks by Count Chaptal are applicable to soils, of whatever materials they may be composed, a knowl edge of this property of leached ashes At all events, the experiment is easily performed on a moderate scale.

"The ashes, produced by the combustion of wood in our common domestic fires, give rise to some very remarkable results .-Without being leached; these ashes are much too active : but after having been de prived by the action of water, of nearly all their salts, and employed in this state, under the name of buck-ashes. they still produce great effect.

"The action of the buck ashes is most powerful upon moist lands and meadows, in a saw, as that saw saws." which they not only f cilitate the growth of useful plants, but if employed constantly for several years, they will free the soil from weeds. By the use of them, land constant. rushes and prepared for yielding clover and other plents of good kinds."

It has been frequently supposed that ashes applied to wet, heavy soils, is injurious This is probably owing to the application Chaptal says, "Wood ashes possess the double property of amending a wet and clayey soil, by dividing and drying it, and of promoting vegetation by the salts they con: leather trunk!
