

Massey-Harris Single Disc Drills

Disc Drills are fast coming into favor with the farmers of Eastern Canada on account of the satisfactory work they do on any ground. They are especially suited to weedy or trashy ground, stubble or sod ground, because the drills roll over or cut through the weeds or sod without catching or bunching.

The Massey-Harris Disc makes a seed-furrow with a wide bottom, over which the seed is distributed at a uniform depth. The Force Feed Run is an even, positive and reliable seed distributor. Discs have Cleaners and Scrapers. Covering Chains supplied when required.
