The primary product is Top Drive Drilling Systems; these units can dramatically improve the drilling, tripping and safety performance of conventional drilling rigs. Canrig Top Drive Systems are principally designed for land drilling rigs and have depth ratings from 12,000 to 22,000 feet. The units are easily installed in most rigs without mast extension or other modifications. Canrig offers both self-contained portable top drive systems installable in a number of rigs as well as fixed installations for one rig only. Features include electric drive and advanced pipe handling functions.
