

"Whoso loveth instruction loveth knowledge."

At no period of life is watchful care over the functions of the brain more requisite than during the acquisition of knowledge by the youth; plodding, persevering study requires a store of vigorous nervous force, or the child may sink under the mental toil.

Stern necessity may compel the student to strain his powers beyond the dictates of prudence; and the early promise of excellence may be blighted thereby.

To such we recommend Fellows' Hypophosphites; it will not only restore the sinking patient, but its use will enable the toiling student to preserve his mental and nervous standard without detriment.
