

# Standard

## Sprays itself with oil all the time it's running

THE self-oiling system starts spraying the working parts of the "STANDARD" Cream Separator with oil the instant you start turning the crank. It stops oiling when you stop turning. There are no glass lubricators that demand continuous attention. The "STANDARD'S" oiling system looks after itself. The oil-proof and dust-proof casing, enclosing the working parts, prevents dust and dirt clogging up the machine and oil getting on to the floor.

The "Standard"

Because of the self-oiling system, the "STANDARD" Cream Separator runs easier. There is always a body of oil in the bearings—always oil between the teeth of the cog wheels when they mesh. This means that the cogs in the different gears are not subject to the ordinary wear. The less wear, the easier the Separator will run, and the longer it will last.

When changing the oil in the oil chamber, once every two or three months, cleanse the working parts by running a cupful of coal oil or gasoline through the machine a few minutes. That will keep your "STANDARD" running at highest efficiency. The self-oiling system is only one of the outstanding features of "the world's greatest separator." Others are described in our booklet. Write for a copy. It's well worth having.

## One man less to run this Dain Press

Pull Power and Self-Feed

COMBINE more features that will lessen labor, increase capacity and make hay baling more profitable than any other press on the market.

**Pull Power** enables you to set the press at middle of stack—the easiest point to pitch to. This does away with at least one man on the stack and also with the necessity of having to move press.

There is no pitman shaft on Dain Pull Power Press, so there is no high, dangerous obstruction for horses to step over and slow up speed. This also makes light draft and helps to make a larger day's work.

**Self-Feed** lessens hand work and so makes capacity larger. Power of team is used for feeding hay into press chamber. It is automatic and positive in action.

No chains, springs or complicated parts are found on the Dain self-feed. It is composed of few parts, so it is simple and practical.

tically impossible for it to get out of order.

All hay is carried well down into hopper and is not strung out on withdrawal of feeder arm. This is essential to evenly packed bales.

**Patent Tucker** automatically folds each charge of hay and insures top price bales—neat, smooth, square-ended.

Press can be quickly telescoped for convenience in transportation.

No feature has been overlooked in making this the most profitable and satisfactory hay press to operate.

## What is Your Idea of a Good Roof?

Is it something like this? A roof that will resist sparks and burning embers; a roof that will wear as long as good cedar shingles used to wear; a roof that isn't going to be an expense for repairs. You get everything that makes a high-grade roof when you buy

## NEPONSET PAROID ROOFING

No Metal to Attract Lightning nor to Rust Out

Over 3,000,000 sq. ft. have been used in the Panama Canal work. Leading Railway Systems are also big users, including the Canadian Pacific. Bought everywhere by farmers for high-grade barns as the best roof value in the market. A big warehouse roofed in 1893 was torn down last summer with the NEPONSET Paroid roof in good condition.

NEPONSET Paroid does not rust like metal; costs less; lasts longer; gives adequate fire protection; can not rattle and roar. Write today for all the facts and new
