

### October 1995

- Identify specific analytical outputs that should be sought with respect to currently suggested approaches (both those now "on the table", i.e., AOSIS protocol, EU "stabilization", UK 2010 proposal, and possible new submissions)
- Decide what analyses should be performed (including for the advancement of the implementation of Article 4.1 commitments, and for discussions of policies and measures in various sectors in March 1996), and within what time period
- Begin considering global emissions trends (perhaps convening a panel of experts)
- Begin considering experiences with market mechanisms such as fiscal instruments and activities implemented jointly

### March 1996

- Begin considering experience of parties in controlling emissions trends (based on SBSTA/SBI meetings on results of in-depth reviews of national communications)
- Address sectoral approaches, including half-day discussions of policies and measures (e.g., for transport, energy, commerce/industry, agriculture/forestry, non-CO<sup>2</sup> gases), consider ways to include approaches relevant to advancing the implementation of Article 4.1 commitments
- Consider technological opportunities

### July 1996

- Review results of analysis/assessment efforts with respect to currently suggested approaches
- Review results of SBSTA and SBI consideration of IPCC Second Assessment Report
- Consider advantages and disadvantages of all approaches and opportunities to combine or reconcile them
- Consider advantages and disadvantages of technology options
