

see these extended to NO_x , especially in view of the projections for emissions of that pollutant. However, the real challenge is to apply the same concept to existing sources. I am confident that when the American people understand what they are doing to their neighbours and to themselves, they will respond to the challenge with the same determination they brought to bear ten years ago near the beginning of what some call the environmental era. There is still time to save some lakes and to reduce some of the other effects of acid rain to which I have referred. But there is not much time. We should have started years ago.

I urge you, the professionals in the air-pollution field, to carry this message back home. We in Canada have started in earnest the great task of controlling acid rain. We invite the United States to do the same.
