THE SOUTH POLE ON ICE DE FREDERICK & COOK MEANS TO

the Island in the Southern Ocean Next September in Small Vessels.

Once more are mariness going to risk their lives in an attempt to penetrate the mysteries of the antarctic continent. The failures of former explorers have not discouraged Dr. Frederick Cook, who proposes to undertake a three years cruiss in small sailing vessels, leaving New York in September next. There is a great area of water to be explored, and Dr. Cook to doubt hopes to get at least a glimpse of the island which in a vague way is known to be sunewhere around the south po'e.

on a voyage of discovery from Cape Horn.

The first mans to discover that the Southern Ocean was in fact the great body of water of the world, extending entirely asound the south pole and having the Atlantic, Pacific and Indian oceans as its arms, was Captain Cook, who sailed from the Cape of Good Hope in 1772. The most successful explorer of this difficult region was Captain Ross, who sailed from the southernmost point of Anstralia in 1840.

So it will be seen that this mysterious and dangerous waste of waters has been invaded from the three points of land most nearly approaching it—the southern tips of Africa, Australia, and South America. The southern point of South America extends nearest so the mysterious island, or continent, which is supposed to occupy the centre of this Southern Ocean. From Cape Horn, South America, to Graham's Land, which is supposed to be on the mainland of the antarctic continent, the distance is but little over 600 miles, due south. From the Cape of Good Hope, southern Africa, due south to Enderby's Land, supposed to be on the mainland of the antarctic continent, the distance is about 1,800 miles. From Angle Land, also supposed to be supart of this ice-bound continent, is about 1,300 miles.

The limits of the antarctic continent,

In the discovery how are presented as locality in the control of t

piece of looking glass (as at B), including it at an angle of forty-five degrees, or midway between horizontal and perpendicular, so as to reflect objects upward. Part of the top of the box must be made to set as a lid or cover upon hinges (as at D), and the space beneath filled up by a piece of ground glass (C), upon which the objects or scenes are reflected. MAY BE MADE.

with the greatest beauty and exactness. The carved line (E) indicates sides of thin leather or cloth tacked on the cover and sides of the box to keep off as much of the circumambient light as possible. In some cameras, instead of a fixed lens, a sliding tube, with a lens at the extreinity, is employed. The inside of the box should be painted over with lampblack, or if that is not handy it may be stained with ink.

"The machine has not been patented, and therefore anyone can make it." IGNATIUS DE LOYOLA. THE STORY OF A SOLDIER WHO BE-CAME A SAINT.

this ice-bound continent, is about 1,800 miles.

The limits of the antarctic continent, as this terra incognita is called are supposed to be nearly coincident with the antarctic circle.

After the first expedition in 1567, another was sent from Peru in 1606. The last discovery of the continent, however, was by Captain Dirk Gerrits, who salled

The limits of the antarctic continent, so the same and was captured by the French. After an extremely painful operation he was ent to his ancestral home in the mountains of Guipuzcoa.

Then occurred what changed the whole course of his life and so enormously influenced the faith and morals of the world. While convalescing he read the "Lives of the Sainte" with a feverish interest, and his imagination was fired with intense religious zeal. He flung aside all ambition to be a warrior and gave himself body and soul to religion.

Religious life in the Church of Rome was at its lowest ebb. The reformers were very day growing bolder and bolder. Luther had just burned the Pope's bull at Wittenberg and was already busy with his translation of the Bible. All the old charished traditions were in danger. What a field for heroism and zeal! Loyola, fresh from the avowed visits of the Virgin and St. Peter, stepped into the breach.

Scarcely convalescent, we find him go-

after mile and day after day, until they had followed it no less than 450 miles without finding a break which would permit them to land. This wall of ice seems to have been produced by the freezing of the water and spray as the waves dashed against the coast and then against the wall itself and was estimated by Captain Ross to be 1000 feet in thickness and 200 feet high. Finding it impossible to land, Captain Ross turned northward leaving the unknown land still almost as much of a anystery as though it had not been seen by him.

CAMERA OBSCURA

Rew to Make a Useful Little Machine Which is Not Patented

In a letter to the Art Amateur a scheme for making a simple camera obscura is described. As the directions are simple described. As the directions are simple described. As the directions are simple described.

too much for the harness.
Out of the shafts went the horse, and Miss Angell, still clinging to the reins, was dragged over the dasher. As she went Rev. Mr. Mitchell seized her by the feet and was himself dragged out. But the weight stopped the horse, and repairs were made. "My mischievous friends tell me," says Mr. Mitchell, "that then I came as near translation as ever any Universalist minister did—for had I not started towards heaven elinging to the feet of an Angell?"—Lewiston Journal.

ing his way in he felt something at his coat tail, and putting his hand into his pocket he found an egg. This he took out and most adroitly transferred it to the pocket of a young man just in front of him—a person as unlike himself as can well be imagined. Arrived in the hall, he remarked where the young man placed himself, and chose his own seat in a corner as remote as possible. When the time came for "Wizard" Anderson to "trouble" him for the egg he arose and explained that he had nething of the sort in his pocket, but that he believed "that gentleman" could produce it, pointing to the Banking and Railway Statisgue that of the "Wizard."—London Daily News.

An Interesting Bankit.

Taxation in French Cities. Lyons, the second city of France, is to try the experiment of abolishing the octroi duties on fodd and other necessaries. An increase in the taxes will make up the deficiency thus created. The Paris octroi has furnished one-third of the municipal revenues.

Teaching the Inventors. The Chinese invented gunpowder. Now the Japanese are showing them how to

A CLOCK IN, THE HEAVENS. How to Tell the Time by the Dipper and the North Star.

the North Star.

In his cot in the big hospital the patient, having dozed half the day, now lies wide awake in the darkness. At the other end of the ward the clock is ticking, but its face is hidden in the gloom, and how is he to tell how the hours are passing? Looking northward through a high window just beside his cot he finds his question answered. He sees there the Great Bear, commonly known in part as the Dipper, climbing upward to its highest perch in the heavens. Why not convert the two uppermost stars of yonder Dipper into the hands of a clock? It is 9 o'clock, and

carcely convalescent, we find him go-harefoot on pilgrimages, scrying in guitals; practicing austerities of the crest kind. He was at Jerusalem, at me, at Venice, where, on the stops of c Church of the Theatines, in a state of eat mental exaltation, he avered that

aligned on the North Star.

hours and minutes, if not the seconds, with only one. But there will be no use of wasting words in explanatory text when a diagram will serve us more lucidly and make the entire suggestion more easily comprehensible.

The long sides radiating from the centre of the circle mark the hours that intervene between the setting and the rising of the sun when the days and nights are of equal length. The short lines indicate the half and quarter hours, and the unmarked segment of the circle represents the portion over which the Dipper passes during the twelve hours of daylight when it is invisible. But it is always found at the old stand to the right of the north star, but somewhat higher in the heavens at 9 o'clock in the evening. The dial is not accurately marked. The patient has not accessible either the astronomical instruments or opportunities for observation receded for received.

In a letter to the Art Amateur a scheme for making a simple camera obscura is described. As the directions are simple and practical we reprint the letter, which runs as follows:

"Sir—Let me call your attention to simple little device to aid the student in sketching. It is such as any of your readers who is handy with the giue pot, a saw and plane can make with a very little outlay of money.

"It is called the camera obscura."

"It is called the camera obscura."

"It is called the camera obscura."

With its assistance the young sketcher out of doors can get his perpective correctly, and not only that, it is a help for drawing the interior of a room. The most beautiful cloud forms, too, can be traced on the ground glass before they can change, and the picture or sketch thus obtained can readily be enlarged by anyone. Proceed in the following manner: "Have a box made twelve inches in length; four in depth, and six in width. In the middle of one end of it let a hole be bored (as at A in my diagram), in which insert a double convex lens, and at the other end, inside the box, place a mineral and temporal sutherists, they are the recognized teachers of Catholle, youth, and six in width.

In the middle of one end of it let a hole be bored (as at A in my diagram), in which insert a double convex lens, and at the other end, inside the box, place a mineral content of the private of the policy of a proper in the next many and predatory this season, at first confidence in the required by anyone. Proceed in the following manner: "Have a box made twelve inches in length; four in depth, and six in width. In the middle of one end of it let a hole be bored (as at A in my diagram), in which insert a double convex lens, and at the other end, inside the box, place a my diagram, and the other end, inside the box, place a my diagram, and the place of the process of a proved on the spot, in stray place in the recognized teachers of Catholle, youth, and strain the cachery of be met with in the most out-of-the-way hamlets and villages head brought in, but this incentive has so far proved of little avail, owing to the scarcity of arms among the people, and to the astute weariness of the wolves themselves. A few companies of troops are now being formed into battue parties in order the more effectually to rid the neighborhood of this harassing wolf-plagus.—
London Daily News.

A Family Dead in an Hour. A Family Dead in an Hour.

A Johannesburg correspondent sends a ghastly message concerning a series of fatalities at Waterton, whereby a resident lost his whole family in the space of an hour. Three children left the house to go to their father, a farmer, who was in a field near the house. The three put their hands in a crevice of the rocks to obtain hirds' aggs. In this crevice was a deadly snake, which bit all the three. Two of them died before the third could get home to tell the mother what had happened. CHATHAM, N. B.

Ireland's Thrift.

Ireland, if poor, is provident. According to the Banking and Railway Statistics, just published, there has been a very large increase in savings during the year 1894, the total amount in the savings banks in Ireland being close on to seven millions sterling in December, 1894, as compared with £6,219,000 for 1898. The actual increase is £740,000 for the year, following an increase of £28,000 in the year 1893, and an increase of £239,000 at the close of 1892, as compared with December, 1891.—London News.

IN MEMORY OF NELSON

Englishmen Again Preparing to Hener
Their Great Sea Captain's Name.

They are raising money in England to erect a memorial to Nelson, the hero of Trafalgar, a Burnham Thorpe, in Norfolk. The memorial is, in fact, partly built already, but the work has lagged, as such things will, and a good deal of money is still needed to finish it. There exists already a memorial hall in the village, and ready a memorial hali in the village, and the church in which Nelson's father ministered has been repaired with funds

WEST'S PORTRAIT OF NELSON. contributed in token of respect to the great admiral's memory. Now, at a time great admiral's memory. Now, at a time when Englishmen are taking more in-terest than ever in their navy, it has been deemed eminently proper to complete the memorial, and a bazaar and exhibition of Nelson's relics has been held in the official apartments of the first lord of the admiralty. A great many interesting re-lies were contributed, including the re-gister of baptisms from Burnham Thorpe

CASKET MADE FROM THE OAK OF THE V

Church, containing this entry; "Heratio, son of Edmund and Catherine Nelson; born Sept. 29; privately baptized Oct. 5, publicly Nov. 15, 1758." A note in the margin, probably written by one of the women of his family, adds: "Invested with the ensigns of the most honorable Order of the Bath of St. James, Sept. 27, 1797; made rear admiral of the blue, 1797; created Lord Nelson of the Nile and of Burnham Thorpe Oct. 6, 1798. Coeters Burnham Thorpe Oct. 6, 1798. Coetera enarret fama."

Ethingies for Dishes.

It is now a fashion in the shingle districts to use cedar shingles at church socials, musical and literary entertainments, where the programme concludes with refreshments. The shingle is used as a food tray, and is coming into general popularity at church socials. There is always a disposition on the part of some of the ungodly who attend thurch socials to steal plates on which the refreshments are served, but when the lukewarm coffee and ancient sandwiches are passed around and ancient sandwiches are passed arou on a cedar shingle worth about ninety cents a thouand, even the small boy has no desire to steal his plate.—West Coast

Since the organization of the United States mint in 1798 it has coined of gold \$1,612,405,375.50, and of silver \$669,929,323.

The Eyes of the Bee.

Every bee has two kinds of eyes—t' je two large, compound ones, looking I' ike hemispheres on either side, and the t' are simple or single eyes, which crown the head. Each compound eye (as one 'coulmaturally suppose from the ter a that designated it), is really an imm some aggregation of eyes, each being cor aposed of \$,500 facets, which means that every object seen has its image refaceted \$,500 times in the bee's tiny brairs. Every one of these facets is the base of an inverted hexagonal pyramid, which appears if fitted The Eyes of the Bee. heragonal pyramid, whree apex is fitted shugly to the head. Each of these pyra-mid facets may be torined a perfect eye, for each has its own tris and optic nerve. Wonderful, indeed, is nature. Length of the Day.

Length of the Day.

The division of the mesn day into 24 hours of 60 minutes each originated with the Egyptians, then passed to Babylon and Greece. Why divided into 24 instead of some other number of hours, it is impossible to sav. The Chinese and a few other oriental nations reckon but twelve hours to the day and night evidently making the whole to correspond with the apparent passage of the sun over one of the zodiacal signs.

THE GREAT SOUTH AMERICAN

Stomach Liver Cure

The Most Astonishing Medical Discovery of the Last One Hundred Years. It is Pleasant to the Taste as the Sweetest Nectar. It is Safe and Harmless as the Purest Milk. This wonderful Nervine Tonic has only recently been introduced into this country by the proprietors and manufacturers of the Great South American Nervine Tonic, and yet its great value as a curative agent has long been known by a few of the most learned physicians, who have not brought its merits and value to the knowledge of the

general public. This medicine has completely solved the problem of the cure of indigestic a dyspepsia, and diseases of the general nervous system. It is also of the greatest value in the cure of all forms of failing health from whatever cause. It performs this by the great nervine tonic qualities which it recognizes and by the great curvative powers two the discretizes. which it possesses, and by its great curative powers upon the digestive organs, the stomach, the liver and the bowels. No remedy compares with this wonderfully valuable Nervine Tonic as a builder and strengthener of the life forces of the human body, and as a great renewer of a broken-down constitution. It is also of more real permanent value in the treatment and cure of diseases of the lungs than any consumption remedy ever used on this continent. It is a marvelous cure for nervremedy ever used on this continent. It is a marvelous cure for nervousness of females of all ages. Ladies who are approaching the critical period known as change in life, should not fail to use this great Nervine Tonic, almost constantly, for the space of two or three years. It will carry them safely over the danger. This great strengthener and curative is of inestimable value to the aged and infirm, because its great energizing properties will give them a new hold on life. It will add ten or fifteen years to the lives of many of those who will use a half dozen hottles of the remedy each year.

Summer Complaint of Infants. All these and many other complaints cured by this wonderful Nervine Tonic.

NERVOUS DISEASES.

As a cure for every class of Nervous Diseases, no remedy has been able to compare with the Nervine Tonic, which is very pleasant and harmless in all its effects upon the youngest child or the oldest and most delicate individual. Nine-tenths of all the ailments to which the human family is heir are dependent on nervous exhaustion and impaired digestion. When there is an insufficient supply of nerve food in the blood, a general state of debility of the brain, spinal marrow, and nerves is the result. Starved nerves, like starved muscles, become strong when the right kind of food is supplied; and a thousand weaknesses and ailments disappear as the nerves recover. As the nervous system must supply all the power by which the vital forces of the body are carried on, it is the first to suffer for want of perfect nutrition. Ordinary food does not contain a sufficient quantity of the kind of nutriment necessary to repair the wear our present mode of living and labor imposes upon the nerves. For this reason it becomes necessary that a nerve food be supplied. This South American Nervine has been found by analysis to contain the essential elements out of which nerve tissue is formed. This accounts for its universal adaptability to the cure of all forms of nervous de-

TAILGEMENT.

To the Great South American Medicine Co.:

Dear Gerts:—I desire to say to you that I have suffered for many years with a very serious disease of the s.omach and nerves. I tried svery-medicine I could hear of, but nothing done me any appreciable good until I was advised to try your Great South American Nervine Tone and Stomach and Liver Cure, and since using several bottle-of it I must say that I am surprised at its wonderful powers to cure the stomach and general nervot a system. If everyone knew the value of this remedy as I do you would not be able to supply the demand.

J. A. Hander, Ex-Tross. Montgomery Co.

A SWORN CURE FOR ST. VITAS' DANCE OF CHOREA. CRAWFORDSTILLS, IND., June 22, 1887.

My daughter, eleven years old, was severely a ticted with St. Vitus' Dance or Chorea. We gave her three and one-half bottles of South American Nervine and she is completely restored. I believe it will cure every case of St. Vitus' Dalice. I have kept it in my family for two years, and am sure it is the greatest remedy in the world for Indigestion and Dyspepsia, and for all forms of Nervous Disorders and Failing Health, from whatever cause.

State of Indiana. State of Indiana, Montgomery County, } 84:

Subscribed and sworn to before me this June 22, 1887.

CHAS. W. WRIGHT, Notary Pue. INDIGESTION AND DYSPEPSIA:

The Great South American Nervine Tonic Which we now offer you, is the only absolutely unfailing remedy ever discovered for the cure of Indigestion, Dyspepsia, and the vast train of symptoms and horrors which are the result of disease and debility of the human stomach. No person can afford to pass by this jewel of incalculable value who is affected by disease of the stomach, because the experience and testimony of many go to prove that this is the one and only one great cure in the world for this universal destroyer. There is no case of unmalignant disease of the stomach which can resist the wonderful curative powers of the South American Nervine Tonic,

wonderful curative powers of the South American Nervine Tonic,

Harrier E. Hall of Waynetown, Ind., says:
"I owe my life to the Great South American
Nervine. I had been in bed for five months from the effects of an exhausted stomach, indigestion,
Nervous Prostration, and a general shattered condition of my whole system. Had given upall hopes of getting wall. Had tried three dotors, with no relief.
