**Fence Friends**  
 Every buyer of Peerless Fence becomes a friend of ours because Peerless fence saves him trouble, money and time. **PEERLESS** Woven Wire Fence is made of all No. 9 Steel Wire well galvanized. **PEERLESS FENCE** requires very few posts, and you save money on the net cost of your fence.

**PEERLESS**  
 The Fence That Saves Expense

One of the reasons why **PEERLESS** Woven Wire Fence is better than other fences is because of the **PEERLESS** lock. It holds securely and without damaging the wire, yet there is just enough elasticity to prevent snapping from sudden shocks, changes in temperature or from any other cause. Stock cannot get through it—under it or over it. There are so many advantages in buying **PEERLESS** Fence in preference to others that we have not room in this advertisement to tell you of them.

Your name on a postal brings you our new printed matter, containing much useful information in regard to fencing. Write for it today.

**Absolute Cure For Sheep Scab**

1/2 of the woollen cloths worn in the world are made from wool obtained from Cooper dipped sheep. Cooper's Dip is used on King Edward's famous prize-winning Southdowns.

It is imported into Australia and the Argentine free of duty, because the sheep-owners know it is an absolute necessity.

Cooper's Dip is the dip officially recognized by the United States Government.

By royal decree, every man in Spain, growing Merino wool, must dip his sheep in Cooper's Dip.

At the Royal Show, England, in the breeds of sheep, every prize-winner used Cooper's Dip.

Last year, enough of Cooper's Dip was used to dip 250,000,000 sheep. Mention this paper and tell us how many sheep you have, and we will send copy of our book "Sheep Scab and How To Cure It," free of charge.

fectious diseases, the healthy should be separated from the sick horses and thorough disinfection of the infected stable, stalls, litter and stable utensils should be carried out in order to prevent the recurrence of the disease. As a disinfectant the compound solution of cresol, carbolic acid or chlorid of lime may be used by mixing six ounces of any one of these chemicals with one gallon of water. One of the approved coal-tar sheep-dips might also be used to advantage in a 5 per cent solution (six ounces of dip to one gallon of water). The disinfectant solution should be applied liberally to all parts of the stable and sufficient lime may be added to the solution to make the disinfectant area conspicuous.

Precautions:—From the fact that the disease is more prevalent during wet seasons, it is always best to guard against allowing the animals to graze upon swampy lands or to drink from ponds of stagnant water. The spread of the disease has been traced along creeks from one farm to another, which would suggest avoiding these places also. The draining of low, swampy lands is especially recommended.

**THE BRONCHO READY FOR THE TRACK**

The Broncho, the Winnipeg-owned pacing mare, with a record of 2.00 1/2 for the mile, is in the south at present in the hands of a competent trainer, and is expected to break some American pacing records during the coming summer. The Broncho was the sensation of 1906. She sprang from obscurity to be the wonder of the season on the American track. Then she developed lameness. She was retired and rested up until the following spring. Again, when she went into training, the lameness returned, and her owners had her bred. Last September, after she was through nursing the foal, she was sent south, and has since been in training for the track this season. The lameness is said to have entirely disappeared, and those who know The Broncho best, and have seen her at work, expect to see things doing in the pacing records before the season's close. The Broncho has amazing speed. Her mark was made as a green horse practically. Properly trained and sent over the stretch by an experienced driver there is no telling what may happen.

The C. P. R. report for 1908 gives the following shipments of live-stock from Alberta in that year: Cattle, 87,909; horses, 11,416; hogs, 48,173; sheep, 25,754; making a total of 5,969 carloads. There were shipped from Saskatchewan, 1,183 cattle, 2,220 horses, 445 hogs, and 14,999 sheep, making a total of 810 cars with the total valuation of stock from both Provinces as follows: Horses, \$1,499,960; cattle, \$4,652,624; sheep, \$244,518; hogs, \$437,562. The average price for horses was \$110; for cattle, \$47, showing an increase of \$6 over previous year; sheep, \$6; and hogs, \$9.

**THE ORIGIN OF BRITISH HORNLESS CATTLE**

Before the Royal Dublin Society recently Prof. James Wilson, M. A., B. Sc., read an interesting paper on the Scandinavian origin of the hornless cattle of the British Isles. He stated in the course of his remarks that till the end of the eighteenth century there were small breeds of hornless cattle in isolated patches round the coasts of England and Scotland and also in Ireland. These breeds were all like each other in color, shape, and, of course, the want of horns. They were generally alike in milking qualities, and even in many small details, such as having short legs, sickle-shaped hocks, narrow chins, and long heads. The date of their arrival in Britain can be fixed by historical and antiquarian considerations as not later than 1066 and not before 850, dates which include the period of the Norse invasions. Cattle of the same kind

**You Pay for the Sand On Roofings**

When you are offered a ready roofing which is coated with sand, mica, or pebbles, you can make up your mind that you are paying roofing prices for the coating.

For such coating does not help the roof. It is merely a "talking point" to make the roof seem different from what it really is.

Such coating, in fact, is a detriment. For it washes off after a few rains, leaving a roughened surface on the roofing, and choking up gutters and drain pipes.

The reason why coated roofings are offered you is because there are 300 substitutes for the genuine Ruberoid, all looking much the same.

By adding sand to the roofing it is made to appear different—that is all. And you pay for a mere selling feature, when you ought to be getting roofing value.

**The First Ready Roofing**

Ruberoid roofing has never been coated with sand or similar "filler." It is the original ready roofing by several years.

The secret of its wonderful properties lies in the Ruberoid gum which we use.

This gum is our exclusive product. No other maker can use it. It is this gum which makes Ruberoid heat proof, cold proof, snow proof, rain proof. Resistant to acids, gases and fumes.

**RUBEROID**  
 (TRADEMARK REGISTERED)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

**The Standard Paint Company of Canada, Ltd., Montreal, Canada**  
 New York Hamburg London Paris

It is this Ruberoid gum which makes Ruberoid so good a fire resistant. You can throw burning coals on a roof of Ruberoid without danger of setting fire either to the roofing, or to the timbers underneath.

It is this exclusive Ruberoid gum which makes Ruberoid flexible enough to stand the strains of twisting and bending which every roof must bear.

**Seventeen Years of Service**

The first Ruberoid roofs ever laid—seventeen years ago—are still flexible, still weatherproof, due to the life of this wonderful gum which is used in no roofing but Ruberoid.

Ruberoid roofing is suitable for any building—from a woodshed to a large factory or public building.

It also comes in attractive colors—Red, Green, Brown—for use on fine homes. But before deciding on any roofing, for any purpose, send for our free book, "All About Roofings."

This book tells what we have learned in twenty years of roofing tests. It gives the advantages and the disadvantages of shingles, tin, tar, iron and ready roofings.

It is a gold mine of practical information.

To get this valuable book, simply address Department 97a The Standard Paint Company of Canada, Ltd., Montreal.

**CLYDESDALE STALLIONS**

For quick sale I am offering a few personally selected imported Clydesdale stallions. They were bought right and will be sold right. First in the lot is SCOTLAND'S MOTTO by Baron Glasserton. Then there are five other newly imported horses and one Canadian-bred.

These horses have been bought right, through my personal connection in Scotland and will be sold right. Call and see them or write for further particulars.
