

The Weekly Monitor.

WEDNESDAY, OCTOBER 31, 1888.

Mr. J. W. Hart is at home visiting his friends. He leaves in a few days to take charge of the dairy department of the State and Federal Experimental station situated at Auburn, Me.

Mr. Hart has secured through acquaintance with dairy management. Would it not be well to have from the public talk upon this business? Who would it be the matter?

It is said that British citizens have nearly \$6,000,000,000, yielding an annual income of \$300,000,000, invested in foreign countries. Great Britain therefore, through her investments, takes tribute from all the nations of the earth, and notwithstanding that her exports largely exceed imports, she by no means indicates an injurious balance of trade, for her imports are very largely the products of human labor set in motion by her own capital.

It is reported that a new process has been discovered in the cost of which will be reduced to 50 per cent. The inventor was Prof. Henry Friend, of New York, whose death took place several months ago. During his experiments he was most successful, but was induced to make a discovery. No boiling of the sugar is necessary, and 99 per cent. of the material is saved. The change from the raw to the refined product is a matter of short duration.

Our streets are in a bad condition, and some steps should be taken to make and keep them better. The largest responsibility for their present state; but it is time there was some agitation to have a character as to ensure a reasonably good roadway at all seasons.

The Warwick Times says:—

On the 14th inst., Miss Rose, youngest daughter of S. P. Outey, Esq., of South Berwick, and Mr. Thomas Curtis, of the same place, were married at the residence of the bride's father, by Rev. P. O. Reed, as deputy of Rev. Mr. Clark, of Nictaux.
