A non-toxic antiseptic of known and definite power, prepared in a form convenient for immediate use, of ready dilution, slightly, pleasant, and sufficiently powerful for all purposes of asepsis—these are advantages which Listerine embodies.

The success of Listerine is based upon merit, and the best advertisement of Listerine is—Listerine.

LISTERINE DERMATIC SOAP

An antiseptic detergent for use in the antiseptic treatment of diseases of the skin.

Listerine "Dermatic" Soap contains the essential antiseptic constituents of eucalyptus (1%), mentha, gaultheria and thyme (ea. ½%), which enter into the composition of the well-known antiseptic preparation. Listerine, while the quality of excellence of the soap-stock employed as the vehicle for this medication, will be readily apparent when used upon the most delicate skin, and upon the scalp.

Listerine "Dermatic" Soap contains no animal fats, and none but the very best vegetable oils; after its manufacture, and before it is "milled" and pressed into cakes, a high percentage of an emollient oil is incorporated with the soap, and the smooth, elastic condition of the skin secured by using Listerine "Dermatic" Soap is largely due to the presence of this ingredient. Unusual care is exercised in the preparation of Listerine "Dermatic" Soap, and as the antiseptic constituents of Listerine are added to the soap after it has received its surplus of unsaponified emollient oil, they retain their peculiar antiseptic virtues and fragrance.

Cod liver oil has never been considered a seasonable remedy in summer. In Scott's Emulsion, however, it is presented in such an agreeable form that it can be taken as freely in summer as in winter. We have yet to hear of a single case where Scott's Emulsion has caused any disarrangement of the digestive tract in a summer patient. Its use is productive of only the best results, summer or winter.

SCOTT & BOWNE, Chemists, Toronto, Ontario,
