

LAKEHURST SANITARIUM, OAKVILLE, ONT.

THE attention of the Medical Profession is respectfully drawn to the uniform success attending the treatment of Alcoholism and Morphine Addiction at Oakville. A prominent medical man in Toronto has, within the last few weeks, paid a glowing tribute to its efficacy in the case of one of his patients who had long since lost susceptibility to the ordinary form of treatment employed and whose life seemed to hang in the balance. Many come to Oakville in the last stages of the malady, yet of these but two cases in four years have proved to be beyond reach of our treatment—a record well deserving thoughtful consideration of the Profession.

LIQUOR HAEMOFERRUM

(Liquid Haemoferrum)

Is the most recent form of administering Haemoferrum (oxyhaemoglobin). The iron of the blood is the best form of iron to administer to the blood, and such a form of iron is Haemoferrum, the pilloids of which have met with remarkable success in the hands of physicians. To meet a general demand for Haemoferrum in liquid form, which might be acceptable to delicate women and children who object to the pillular form, we recently devised Liquor Haemoferrum, a delicious cordial, each teaspoonful of which contains six grains of Haemoferrum. The addition of the small quantity of pure spirits it contains seems to be of value in this preparation, inasmuch as its slight stimulating properties work advantageously with the administration of iron.

Literature and samples will be sent to physicians on request.
