

How Do You Know You Are Using The Best Carbide?

If your Acetylene gas is costing more than you were led to believe it would cost, and

- if the gas burns with a bluish flame, and
- if the flame flickers or jumps, and
- if the Acetylene jet does not light a room as brilliantly as promised, and
- if your generator is a good one,—then you may be sure you are not using the best Carbide.

 Calcium Carbide gives off 4.8 cubic feet of

Acetylene gas for every pound of Carbide. That makes Acetylene cost one-third less than Oil, and half as much as Electricity.

 Calcium Carbide generates a brilliant, clear white flame that illuminates the room with the softest, best light—next to sunlight—for reading and working.

Let us send you the name of a dealer in your neighborhood who has  Calcium Carbide.
