## Young's Improved PULLEY STILE HINGE

*For Box Frame Windows.*

**SHUT — (to take out sash) — OPEN**

WITH the above hinges the ordinary double hung window sashes can be taken out of the frames for cleaning, &c., without disturbing the stops or parting beads, and are the result of long experiment, to insure strength and perfect action. The parting beads arc cut to mitre, and slide in with the pockets H, to clear the cheek of sash—thus the sash recedes in at one side, and clearing the opposite parting bead is taken out, the pulley boxes are in the pockets H, and the lines are held in a lock plate on inside of sash by means of a knot on the end of the line, which is released and run up to the pulley box in taking out the sash. The attention of architects and builders is called to these hinges. For further information and price apply to the inventor,

**J. H. YOUNG,**
