

THE 1910 IMPROVED HADSEL CONCRETE MIXER

MANUFACTURED IN CANADA

THE improved mixer is equipped with a loading hopper which contains 1-2 yard of unmixed material. This loading hopper is operated by the engineer by means of lever and gate. While one batch is being mixed the laborers are not standing idle, but are busy filling the hopper, and upon the batch being discharged the gate is pulled and the contents of the hopper delivered into the mixer, allowing reloading to proceed almost uninterruptedly. This new feature combines all the advantages of a continuous and a batch mixer.
