

'Reliable disinfection may be obtained by using a spraying pump and applying a lime wash to every five gallons of which a pound of commercial carbolic acid is added, forcing it into every corner, crack or crevice of the walls, stall, divisions and floors.

'The solids used are lime, chloride of lime, and carbolate of lime which are useful for sprinkling floors or mixing with composts and manure heaps.

'More powerful chemicals are prescribed for disinfection, but in selecting the above we have considered efficiency, safety, cheapness and facility in procuring as most country druggists can supply them.'

Insidious and incurable as this disease undoubtedly is, the facility with which the infective properties of the *bacillus mallei* are destroyed by sunlight and dry air as well as by such measures as above suggested, and diagnosis by the mallein test being almost absolutely reliable, it is quite within the possibilities that this disease may be completely eradicated, and if fresh importations are prevented, our horses will have a clean bill of health which will greatly enhance their value and ensure a ready sale.
