

ALL DONE BY **The CEMENT-GUN**

1. THE ELEPHANT BUTTE DAM.

One of the largest masonry structures in the world; water-proofed on the upstream face with "GUNITE."

2. THE WOOLWORTH BUILDING.

The greatest office building; all structural steel fire-proofed with "GUNITE."

3. A BUNGALOW COLONY.

A group of artistic houses coated with "GUNITE."

AND

4. AN ARTISTIC STAIRWAY IN CALIFORNIA.

Made of "GUNITE."

5. These are only four of the many uses to which a Cement-Gun is adapted.

6. "GUNITE" the product of the Cement-Gun, is sand and cement, hydrated at the nozzle of the gun and shot into place. You therefore get the benefit of the initial set of the cement and a product that is denser and of greater strength, both in compression and tension, than any other known cement-sand product.

7. A post card will bring you interesting literature concerning the Cement-Gun and its product, "GUNITE."
