

not glossing over the dangers which may, under certain conditions, result from the habit, he has attempted to point out the folly of the hysterical denunciations which have been heaped upon it by pseudo-philanthropists and ignorant medical men. The question of castration in the case of masturbating lunatics has been brought up afresh for discussion, and the author has frankly stated his reasons for believing that, under certain circumstances, such a procedure would not only be justifiable, but proper. He has also separated Spermatorrhœa from pollutions, aiming to show that the two are absolutely distinct and separate diseases; that Spermatorrhœa is not the finale of pollutions, but is a disease *sui generis*, the symptoms, course and treatment of which are entirely different from the latter. He has also striven to correct the foolish and ridiculous idea that the man afflicted with spermatorrhœa is foredoomed to impotence and sexual uselessness.

"In the chapter on Prostatorrhœa he has attempted to lay down the natural history and symptoms of this variety of disease, and has protested against the loose and unscientific method of regarding it as practically the same as prostatitis, with which latter disease, in his opinion, it has absolutely nothing in common."

The work is a very valuable one, and should be read by every medical man. There is no class of diseases which ought to be better understood by medical men, and it is because they are not so understood that so many fall into the hands of Charlatan, who play on the fears and credulity of the unfortunate patient.

F. W. C.

A Text-Book of Histology, including Microscopic Technic. By Dr. A. A. Böhm and Dr. M. von Davidoff, of Munich, and G. Carl Huber, M.D., Junior Professor of Anatomy and Histology, University of Michigan. Authorized Translation from the Second Revised German Edition, by Herbert A. Cushing, M.D. With 351 illustrations. Price, \$3 50 *nett*. Canadian agents: J. A. Carveth & Co., Toronto; W. B. Saunders & Co., Philadelphia.

We have in Böhm and Davidoff's work one of the most thorough treatises on Histology yet published, and the translator deserves our thanks for rendering it into English.

In the preface to the English translation the editor says: "In the preparation of this American edition the editor has retained substantially all the subject matter and illustrations of the second German edition, although certain minor changes in the arrangement of the text seemed desirable." The American edition is, therefore, based on the German edition, which, by the excellence of its text and illustrations, has met the approval of teachers and students of Histology.

After an introducing chapter on microscopical technic, the cell and elementary tissues are studied in detail. Then the organs are considered and fully discussed. The sections on the motor and sensory nerve endings and on the spinal and sympathetic ganglia are particularly well treated and illustrated; and the innervation of glands and organs is ably presented. The glands with in-
