CANADIAN PACIFIC.	Janet's Way of Growing Young.  As a matter of fact Janet was borg exactly two years before her brother Fred; therefore in the natural course of things when he was ten she was twelve and gloried in it. When Fred was known to be fourteen, she still confessed to sixteen. When Fred boasted eighteen years, she timidly acknowledged herself just over nineteen. When Fred came home from college and had a party in honor of his twenty-first birthday, Janet said to her friends: "What a boyish fellow Fred is! Who would think he is only a year younger than I?" When Fred declared himself twenty-five and old enough to get married, Janet said to a gentleman friend: "Do you know, I feel very jealous of Fred getting married. But, then, I suppose twins always are more attached to one another." And two years later at Fred's wedding she said with a girlish simper to the guests: "Dear old Fred! To see him married

SHEEP CULTURE

Advice Where a Point is Made of Grow-

ing Lambs for the Market. Sheep and wool are appreciating in alue, and the business of growing them is likely to be prosperous for a term of years, the point is well taken just now. What breeds to use and how to conduct the business depends upon the object in view in growing them and the environment or surrounding circum stances. For instance if sheep are to be kept on low ground, the Romney Marsh breed are the right ones. If the land is hilly or mountainous, Merions are the best. And if on old, well-cuitivated farms near market for lambs, and of the Down breeds are suitable. On the ranges of the West, Southwest and South, the present sheep need breeding up, and there is not so good a sheep to breed up with as the Rambouillets or French Merions. To commend them for this purpose are their hardiness, density, firmness, length and weight of wool, size of the animals and great prepotency, the pure-bloods having been bred in lin over a century. To show esteem in which they are held on the Western sheep ranches, the ranchers last season took the last carload of rams that could be found in any locality in the East.

On Eastern farms, if a point is to be made of growing lambs for market, without much regard for quantity of wool, and if there are good enclosed Winter quarters for them, and succu-lent and rich food, any of the Down breeds or the Dorsets would answer the purpose well. Most of the ewes of farmers are Merino grades. A cross of pure-bred Down rams upon them pro-duces very fine early market lambs; but when the blood of the ewes is mainly of English breeds I would cross them with Rambouillets. Sheep do well in Summer where they can get sufficient herbage, either of fine or coarse grasses. many of the weeds or leaves of bushes and briars. If their range is limited, A change of pasture occasionally is de-sirable. Pue water and constant access to salt are necessary to health. Good clover or fine hay will carry them through the Winter nicely, but a little grain daily from February to grass is advisable. Timothy hay is not a suitable food for sheep. Merino sheep will winter well on bright straw and a pint of grain a day. In this case they should be fed a third more straw than they will eat up clean, because they reject the coarse butts. They will not refuse a daily feed of roots or silage. Such will benefit them, but it is not a necessity as with Eaglish sheep.

Value of Coal Ashes. As a walk around the dwelling of down to the bara they are first class. They are good for street crossings and when the pavements are icy, just splen-As an improver of roads for horses and wagons they come in very handy when the clay subsoil is sticky. But as an improver of clay soils for farm purposes their value is nil. A neighbor who hauls out much manure from town claims that he has had enough of coal ashes. He is a gardenet and all of his land is now filled with coal cinders which dull his hoes and other tools while working his land. In planting cabbage and tomato plants he has to use a stick to plant with, for he says if a cinder runs against his finger when planting, he has a sore finger; it does not hurt a stick. J. F. says that "10 to 30 tons of c plied per acre." Why not use sand to ameliorate the clay instead of cinders? We have a soil in some portions of our hills hereabouts which is filled with fine broken flint. Farmers have no love for such a soil and coal ashes are just as bad. My gardener friend tells me that he is going to use sand to amelior ate a certain warm spot of clay on his This is interesting and I shall watch it .- F. K. S., Festus, Jefferson

Treat Cows Like Horses, Aim to keep the cows perfectly clean, Until you have tried it you don't know what an economical and paying policy it is. Clean, dry bedding for the milch cattle goes a long ways, but it does not do all. Cows should be daily curried the same as horses, which not only removes all stable compost and dirt from their flanks and legs, but keeps the skin stimulated and conduces to the animal' health. And, as regards neatness and auxiliary to milk purity, the procedure goes without saying. Nothing looks so "penny wise and pound foolish" as to see a dairyman brush off the cow's udder preparatory to milking, while her flanks are covered with filth. Once get the cows' bodies clean, and it is a comparatively easy matter to keep them so. With a daily change of bedding and a daily currying the feat is accomp lished.-Geo. E. Newell

There are many ways of reducing the cost of milk, but the one that should receive the first consideration is the cow.
Is she a good one? If she is not, then the problem of how to make cheaper milk is a hard one to solve. I believe that one first-class cow in a herd of scrubs would, if the owner were an observing man, soon be the means of lessening the cost of the milk in that dairy by replacing the scrubs with good cows.
When an observing man notices the difference in yield between a good cow
and a poor one it sets him to thinking,
and he finds out that it does not pay to keep poor cows. When one good cow will yield as much as three poor ones it does not require much intelligence to see that the extra food taken to support three cows in stead of one is just that much feed thrown away.—V. M. Couth

This is the written testimony of a well known Toronto journalist—you can have his name if you want it. Agnew's are the best pills and 125% cheaper than any other. 40 pills to cts.; But why make sweet cream butter. The general market, where it goes to the average consumer, does not demand it. Unless one wants it for use in the family, or has special consumers that prefer it, I can see no occasion for mak-ing it. Of course, if one has customers be made. That is the only business-like way to do; make an article just exactly as the consumer wants it, and then s good price can be obtained. If a cus-tomer thinks he wants sweet cream tomer thinks he wants sweet cream butter, make some for him and let him try it. The chances are that after he has tried it, he will prefer that from ripened cream. I have seen sweet cream butter entered many times at fairs and never knew it once to draw i prize.—C. P. Goodrich. Wisconsin. A Cheerful Prophecy.

A Cheerful Propiecy.

The animal that cannot be trained to keep its wits about it on the approach of a motor car must disappear. Its stupidity, filth, sleth, fear of everything and useless size prove to the most conservative that it must go. The horse that will not stand a motor car may be the delight of its owner, but it is a public euisance and a public danger, and ought to be shot like a mad dog. Horsemen have no right to bring unmanageable brutes into the public highways, to the public danger, and it is time this elementary justice should be recognized. The motor is going to become the means of locomotion for all light transit, and by the ordinary roads as they exist to-day. It is the pedestrian and the horse that have got to give way. The horse in traffic, if he chooses to bolt, is uncontrollable. The motor, from the lightest bicycle to the heaviest car, is perfectly controllable, occupies half the space, and travels now through the congested streets at double and treble the speed of any horse-drawn vehicle. The only thing the two have in common is that at times they both refuse to go.

The unobservant talk of the accidents that would happen. The accidents will be a great deal fewer in number. A conclusive proof of this, to any one with any sense, is the fact that in the thousand miles tour no one, I believe, was hurt, though the roads were lined with spectators. In the race from Paris to Berlin, three days, and the tour

with spectators. In the race from Paris to Berlin, three days, and the tour around Italy, ten days, but two chil-dren were killed, the result entirely of their own carelessness or that of their parents. Suppose, for a moment, that in France a hundred and ten teams, or, rather, droves, of horses-there were a hundred and ten motors-ranging from fifty in a bunch down to two—this was the horse-power of the machines—had been let loose and driven at top speed for three days on the public roads. Will anyone tell me that thousands of people would not have been killed, that hundreds of drivers would not have lost their lives as well? But that would have been described as sport. . The only danger to be feared from the motor car is to its own driver, the only drawback is its own imperfection. Read the reports of automobile accidents: proportionately, these are far fewer than from any other form of locomotion and in nine cases out of ten the accident occurs to the driver or the occupant of the car: in the tenth case it is owing to the stupidity or the carelessness of the person who gets in front. The average pedestrian has simply got to learn to keep out of the way, and that is the end of it.—Joseph Pen-nell in "Contemporary Review."

### No Breach of Discipline.

HE colonel was entertaining some of his friends with stories of army life, and the talk turned to the inflexibility of orders. That Paines' Celery Compound reminded the colonel of Tim Murphy's

Murphy had enlisted in the cavalry service, although he had never been on a horse in his life. He was taken out for drill with other raw recruits under command of a sergeant, and, as luck would have it, secured one of the worst buckers in the whole troop. "Now, my men," said the sergeant in addressing them, "no one is allowed to any of the crowded streets of our cit-ies or towns. The observer will note countenances full of feverish anxiety, dismount without orders from a super-

for officer. Remember that." Tim was no sooner in the saddle than he was hurled head over heels through the air, and came down so hard that

"Murphy," shouted the sergeant, when he discovered the man spread out

on the ground, "you dismounted!" "Did you have orders?"
"I did."

"From headquarters, I suppose?" vith a sneer.
"No, from hindquarters." after riches and honors, social and household worries, sexual and alcholic excesses, watching and anxiety, and loss of near and dear ones, all contri-

How One Million is Spent

Not less than one million dollars is annually spent by people seeking am absolute cure for Catarrh, Bronchitis and Consumption. Numerous are the remedies, but the one standing preeminently above all others is Catarrhozone. It cures these diseases because it is sure to reach them. Catarrho-zone is inhaled into the lungs, throat and nasal passages, and bathes every part of the diseased membrane with its germ-killing, healing vapor. You simply breathe Catarrhozone and it cures. Price 25c. and \$1 at druggists, or Polson & Co., Kingston, Ont.
