## **BACKYARD POULTRY PAY** How Seventy-six Hours Gave a Profit oi \$58.29.

SUGGESTIONS FOR FARMER

Spraying Material Should Be Ordered Early This Year-Keep the Farming Mill Going-Work In the Dairy, Stable and in the Orchard.

(Contributed by Ontario Department of Agriculture, Toronto.) OW A PROFIT of \$58.29 was made from twenty-six hens. which turned the table scraps, and \$26.13 worth of feed into \$84.42 worth of eggs is described in a recent circular of the Central Experimental Farm, Ottawa. The birds were not selected with a view to the greatest production pos sible, but rather to the securing of such a flock as any amateur might go out and purchase. The flock consisted of twenty-six birds-four of which were three-year-old Black Leghorn hens, six White Leghorn pullets and one Black Minorca pullet hatched in May, and the balance were cross-breds Black and White Leghorns, hatched in June. They were not put

into winter quarters until well on in November, and it was December 7th before the first egg was laid. How the Flock Was Kept.

An old wood shed about eleven by An old wood shed about eleven by twelve feet was utilized as a poultry house. In the south side, fifteen inches from the floor a line of win-dows two feet wide was placed and above these an opening about eigh-teen inches wide was made across the entire front. In this a frame, covered with light cotton, was hinged. This frame was kept hooked up to the ceil-ing through the day, except in the severest weather.

Hoppers of oyster shell, beef scraps and dry mash were kept constantly before the flock. The dry mash con-sisted of bran, middlings and corn-meal, equal parts, one-half part gluten and one-half part blood flour. A deep straw litter was kept on the floor into which all whole grain feed Was scattered.

In the morning, mixed grain, usually cracked corn, wheat and oats, equal parts, was given. At the same time warmed water was given. At noon the water was renewed and all the kitchen waste, such as vegetable parings, was fed. Usually at this time a few handfuls of mixed grain were also scattered. The methods followed were such as

almost any city dweller could follow. A very small place for a house and no yard room are required. By buy-ing pullets in the fall and selling them when poultry is high in the early summer the most will be had out of the flock without interfering in any way with either your own or your neighbor's back-yard garden.

**Timely Agricultural Suggestions** Seed grain and root seeds secured from the best sources available and in ample quantities for spring seeding

the variation in the temperature from day to day. On fine days turn all the cattle outside for an hour in the variation in the temperature from sunshine. It may mean a little less milk, but it will be paid for in the improvement of the health of the young stock.

GUIDE-ADVOCATE, WATFORD, MARCH 22, 1918

The trees in the apple orchard may be scraped down now, so as to make more effective the later spraying of the trunk and the main branches. Egg masses of the Tussock moth, conspicuously white against the dark bark, may be removed by means of a wire brush or hook on a pole.-Ontario Agricultural College Notes **ONTARIO BUYS APPLES** 

Money in Orchards When Properly Planted and Cared For.

### BACKYARD GARDENING PAYS

Hints By an Expert In the Feeding and Care of the Mare and Foal. (Contributed by Ontario Department of Agriculture, Toronto.)

THE PLANTING of commercial apple orchards in the Province of Ontario is highly desirable for several reasons:

1. Ontario is not producing enough good apples for home supply, but imports annually from Nova Scotia, British Columbia, Washington, Oregon and California.

2. Production in Ontario is likely to fall off still more because no com-mercial planting is being done. Very few commercial apple orchards have been set out in this province since 1911

8. Of the thousands of young trees set in the bloom years of 1905 to 1911 a large proportion have already passed out of existence. Probably not more than 20 p.c. of the trees plant-ed during those years will figure in the commercial production of the futhe commercial production of the fu-ture, and certainly not more than 40 p.c. of them are alive and receiving attention to-day. 4. The home orchard will never

again be an important factor in com-mercial apple production in this province, because it is not large enough to be worth while. In seasons when scab control is difficult or when prices are down because of a heavy crop, the return from the small orchards is not large enough to justify the ex-pense and risk involved. When conpense and risk involved. When con-ditions are unfavorable the small or-chard passes quickly into a state of neglect; this is why apple growing in Ontario is at such low ebb at present.

5. Fruit is an essential part of diet. While it is true that in case of ne-cessity people can live without it, it is also true that health suffers and nutritional complaints become much more general in the absence from the dietary of fresh fruits and vegetables. The apple is the most important and most useful fruit of the temperate zone and, from the standpoint of pub-lic health its culture should not be neglected.—Prof. J. W. Crow, On-tario Agricultural College, Guelph.

# ANNOUNCEMENT

AVING bought out the Business of Mr. R. C. McLeay, it is our intention to combine the two yards into one and to keep an up-todate lumber yard. We have been in the Lumber Business for a long period, and we are thoroughly acquainted with every branch of it. We looked ahead and we saw lumber was advancing, so we bought up \$15,000.00 We are going to give our customers the benefit of this good buy. worth. You will make on this from \$3.00 to \$5.00 per M ft.

#### OUR AIM--

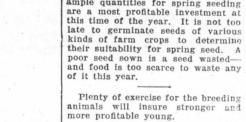

Is to supply the public with Builders Supplies at prices that cannot be equalled. A car of 5X shingles expected at once. Secure yours off the car at a reduction.

Est. 1870 G. CHAMBERS ESTATE

We have the following lines in stock and guarantee the prices are lower than in six weeks from now :

Home Washers\$	12.50	
Bonnie Washers	6.50	
	5.50	
	5.00	
	5.50	
O-Cedar Mops		
Vacuum Cleaners	7 50	

When the work is not too pressing get the fanning mill busy to ensure a good supply of sound, plump seed grain free from weed seeds. The oftener the seed is put through the fanning mill the larger and plumper the grain will be, and the fewer the weed seeds in it. Always avoid sow-ing sunken grain and weed seeds---they are about the poorest invest-ment a way can make

ment a man can make.

Secure an amply supply of spraying material now. Bluestone will be required for spraying potatoes, iron sulphate for spraying mustard, lime sulphur for the fruit trees and paris green or arsenate of lead for potato beetles and other insect pests. Be sure to secure the supply of formaliu for treating seed grain to prevent smutt and for treating potatoes to prevent scab. One pint of Formalin is sufficient to treat from 20 to 30 bushels of grain and the same amount will treat from 40 to 45 bushels of potatoes. Keep the Formalin bottle well corked and do not leave it in a place where it is likely to be frozen.

Securing farm labor will be the great problem in agriculture this year. Write to the Ontario Government Public Employment Bureau, 15 Queen's Park, and also consult your agricultural representative. Put in your order early with these men and you may get the help you requireand without cost.

The ideal temperature in the dairy stable, combined with good air, is between 50 and 60 degrees Fahrenheit. It is a good plan to have a reli-able thermometer hanging at some central point in the stable and note

To gain wisdom you must have faith enough to believe those who are experienced.

Spare the children trom suffering from Spare the children from suffering from worms by using Miller's Worm Powders, the most effective vermifuge that can be got with which to combat these in-sidious foes of the young and helpless. There is nothing that excels this pre-paration as a worm destroyer, and when its qualities become known in a house-hold no other will be used. The medic-ine acts by these frequencies are accelered. ine acts by itself, requiring no purgative to assist it, and so thoroughly that noth ing more is desired. 171
