

Ingluvin is extracted from the lining membrane of the gizzard of the species "Gallae." It is far superior to pepsin of the hog.

Ingluvin is fast superseding other remedies in indigestion, dyspepsia, cholera morbus, cholera infantum and stomachic and enteric ailments. It is specific for nausea in pregnancy, alcoholism, seasickness or from whatever cause.

Ingluvin causes absorption, increases peristaltic action, thereby removing accumulations from the mucus membrane. It allays inflammation, invigorates the debilitated organs and assists nature to perform her proper functions.

Ingluvin can be used in combination with other drugs, as in a case with pepsin.

As there is no tonic effect, the dose may be repeated as often as necessary. For dyspepsia, indigestion and sick stomach, caused from debility of that organ, 5 to 20 grains after each meal. For cholera morbus and alcoholism, 20 grains every two hours until relieved. For marasmus, 5 grains every four hours. For vomiting of pregnancy, full doses of 20 grains should be given; administer first dose immediately upon rising in the morning. In all other forms of nausea, from 10 to 20 grains until controlled.
