IMPORTANT TO DOCTORS.

This will be an interesting summer in Britain. The meeting of the British Medical Association at Brighton, from July 21 to 25, and that of the International Medical Congress in London from August 6 to 12, will add greatly to the usual pleasure of a visit to the Old Land.

Those who intend going would do well to communicate with the Editor of the CANADA LANCET before going, as special inducements in the rates for steamship accommodation can be offered, covering first-class service in every way.

Information will be furnished to those who purpose taking in these two great conventions, or for any other reason wish to visit Britain this summer. The information will cover dates of sailing, rates, route, and other items of interest.

MEDICAL PREPARATIONS, ETC

THE SEQUELAE OF LA GRIPPE.

Among all of the various acute and exhausting illnesses that afflict mankind, there is none that so generally results in distinct prostration as epidemic influenza, or la grippe. Even the grippal infections which are uncomplicated or unaccompanied by serious organic changes are more than apt to leave the patient in a thoroughly devitalized condition after the acute febrile symptoms have subsided. It is for this reason that the treatment of la grippe convalescence is of special importance. The anemic, debilitated, depressed patient requires a systemic "booster" that will not only stimulate but revivify and reconstruct. It is distinctly wise, in such cases, to commence vigorous tonic treatment as early as possible, preferably by means of Pepto-Mangan (Gude), the hemic builder and general reconstituent. This standard hematinic increases the vital elements of the circulating blood and, by increasing the appetite and improving the absorptive and assimilative functions, quickly restores both hemic and general vitality.
