It is reported that the Telqua valley in Northern British Columbia will be the scene of the greatest activity this coming summer. The mineral resources of this area are most varied, and prospectors representing rich syndicates have been for some time testing in the country.

The development of that section is due almost entirely to the fact that the Grand Trunk Pacific is likely to tap it either by the main line or by some of the feeders which will be run out from the trunk line to reach the rich country tributary to it.

A Montana syndicate last summer covered a considerable part of the valley, finding there the richest ground for their enterprise. The syndicate was organized in the fall and carried on with the least possible information being sent to the world.

The country was explored and locations made preparatory to gaining a rich reward when the syndicate was organized. Over sixty claims are reported to have been taken up. In doing so, only the most casual prospecting was done.

The surface are reported by disinterested parties to be of the most extraordinary, including short of marvellous. One outcrop visited by a person who recently came from there is described as 5 feet wide. This was all that had been stripped, so that it might be seen in the open.

The ore is so rich that the syndicate, it is said, will attempt this spring to pack some of the rich ore out to the Skeena in order to have it shipped down to one of the coast smelters. There is likely to be a rush before spring opens by prospectors working for the syndicate in order that the valley's resources may be fully explored before the fame of the Telqua becomes too widely known.

A number of interested are, it is said, in the Tequa valley. The Tequa is a tributary of the Bulkley river, which is turned empty into the Skeena at Hazelton. The only means of reaching the Tequa is by the Skeena by way of the river mentioned.

A shorter route could be provided by opening a road from the lower part of the Skeena into the Tequa directly, thus avoiding the long route by way of Hazelton.

The rich coal of the Bulkley extends also up the Telqua. For sixty miles up this latter river syndicates representing Eastern capital have, it is reported, taken up coal lands. The total area thus taken up is put at 120 square miles. These syndicates are being by the experience gained in other parts of British Columbia where fortunes were made by small investments in coal fields, shortly before the opening up of the Skeena.

The total area thus taken up is put at 120 square miles. These syndicates are being by the experience gained in other parts of British Columbia where fortunes were made by small investments in coal fields, shortly before the opening up of the Skeena.

is an excellent body of iron ore in the Winnipeg, carrying good gold values, the kind of ore that is desired by the smelters generally. This body is doubtless what the Grady company is looking for.

Several thousand feet of development have been done on the Winnipeg. In the past, the mine having a 300-foot shaft, with much drifting. It has a small machinery plant, including air compressor, pumps, hoist, etc., with bunkhouses for the men. The C. P. R. was built to the mine in 1889, and altogether some 5,000 tons of ore were shipped to the several smelters.

The company, however, operating the Winnipeg, was always hampered for funds, and was unable to give the development it was believed to be worthy of. Two or three cars of material have been taken to the mine, and three shafts will be employed in taking out the water.

Hydraulic mining in Canada. Mining men will be interested in the annual report of the Rosella Hydraulic Mining and Development Company, Ltd., which for the past three years has been working on Rosella creek. This creek is situated in the Liard mining division of Cassiar, about 12 miles from the Dease river, and is one of the creeks which in the early days produced a very large amount of gold.

The Rosella Company has shown a great deal of enterprise in surmounting the difficulties of transportation. It is capitalized at \$250,000.

Of the work for the year from October 4th to September, 1904, the report (condensed) says: "Built house at Haskins's Landing, on the Dease river, this being the point where freight for Rosella creek will be landed and stored. Built 12 miles of trail 12 feet wide, built camp half-way on trail, built permanent bridge over Spring creek, cleared ground for permanent camp on Haskins's lease, constructed large water ditch three-quarter mile long, carrying capacity about 1,200 inches of water. The ditch all the dead water and ready for the plant will take about one month to set up the plant will take about six weeks.

The ditch is to be completed before the end of July, thereby giving not less than two months' run this season. The contract for the cutting of the lumber and blocks necessary for the building of the flume was let by public tender to the best bidder before the end of July, thereby giving not less than two months' run this season. FIRE AT COAL CREEK. Vancouver, March 13.—Fire destroyed the big tippie at Coal Creek colliery on Saturday evening. The loss is \$150,000. Coal Creek's output is 2,000 tons daily. The tippie extended across the valley, cutting the tunnel on each side. A temporary tippie will be rushed up at once, and at the same time the output at Michael and Morrissey will be increased to fill all orders.

WAS IN ORDER. Speaker Pooley's Decision Regarding W. G. Cameron's Amendment to Reserve Bill.

In the legislature Monday afternoon Speaker Pooley decided that W. G. Cameron's amendment to the Songhes Reserve Bill was in order.

It will be remembered that Mr. Cameron introduced this amendment to the bill in committee, when it was ruled out of order.

It was brought up again on report on Friday, when the Speaker reserved his decision.

As stated Speaker Pooley ruled it in order. On being put to the vote the amendment was defeated by 13 to 13.
