## HEAT AND DISEASE.

THE SUN'S RAYS ARE FATAL TO MANY SPECIES OF GERMS.

As a Disinfectant Sunlight Is the Greatest Agent In Nature-Temperatures at Which Disease Germs Are Destroyed.

Sunlight is fatal to some of the lower forms of living things, including certain disease germs which are the cause of some of the most fatal infectious diseases that afflict the human race. In fact, the greatest disinfectant in nature is light, or, to be more exact, the radiations of the sun, including heat rays, light rays and the invisible rays at the violet end of the solar spectrum.

An infectious disease is one which may be contracted by the introduction into the living body of living disease germs, which may be contained in different kinds of infectious material. Thus the disease germ (bacillus) which produces diphtheria is contained in the "exudate" or "false membrane" de-Lehigh and Scranton
Coal, Virginia Splint
Coal for domestic use.
Smithing Coal, Hard and Soft Wood in all lengths,
All are of the best qualities and at lowest prices
Delivered promptly to any part of the city posited in the throat or nasal passages of those suffering from this disease, and the material coughed up by a patient with diphtheria is infectious material. In cholera and in typhoid fever the discharges from the bowels contain the germ and are consequently infectious material.

Now, the object of disinfection is to prevent the extension of infectious diseases by destroying the specific infectious agents—germs—which give rise to them; and this is accomplished by the use of disinfectants. Having, as I nope,

made this clear. Any chemical agent which destroys or masks bad odors is commonly spoken of as a disinfectant, and there are a large number of so called "disinfectants" in the market which are simply deodorants and which are entirely untrustworthy for the destruction of infectious material-that is, material containing

living disease germs. There is no recipe for not worrying These disease germs belong to the class of low vegetable organisms-mi-"DRINK GRANO, CEREAL COFcroscopic plants-known as bacteria, which as a rule thrive better in the darkness than when exposed to day-It's some compensation for great evils that they enforce great lessons. light, and some of them are quickly destroyed by exposure to direct sunlight. In experiments made by me in "DRINK GRANO, CEREAL COF-1893 it was demonstrated that the cholera bacillus is in allibly killed by ex-A propensity to hope and joy is real riches; one to fear and sorrow, real posure to direct sunlight for an hour or two, and the distinguished German bacteriologist, Dr. Robert Koch, has shown that the bacillus of consumption -tubercle bacillus-is destroyed by similar exposure in a time varying from a few minutes to several hours, depending upon the thickness of the layer of material in which it is im-

Nothing can be hostile to religion bedded. As a result of this it is evident that -You should not feel tired all the the material coughed up by patients time-healthy people don't-you won't if you take Hood's Sarsaparilla for a with consumption and containing tubercle bacilli in vast numbers is far less dangerous to the community in regions where the patient can live out of doors "DRINK GRANO, CEREAL COFand where the sun shines nearly every

day in the year. Some disease germs which are not killed outright by exposure to the sun's rays are greatly restrained in their development. This is true of the bacillus Dundas, and Henry Bell, who built velopment. This is true of the bacillus ODRINK GRANO, CEREAL COFof typhoid fever. Although it has been shown by carefully conducted experiments that certain disease germs are promptly destroyed by the luminous radiations from the sun, and especially by those at the violet end of the solar spectrum, it is also true that the heat rays play an important part in the de-

struction of harmful bacteria. This is partly due to the fact that certain disease germs are quickly destroyed by being deprived of all moisture-by desiccation. Thus the germs of cholera and of pneumonia quickly

perish when completely dried. Other germs, however, as those of typhoid fever, of diphtheria and of consumption, may retain their vitality in a dried condition for several months. But the germs of all these diseases are destroyed by a comparatively low temperature. In experiments which I made several years ago I ascertained that the germs of pneumonia and of cholera were killed by exposure for a few minutes to a temperature of 126

degrees F. A still lower temperature is effective if the time of exposure is prolonged. It is therefore evident that prolonged exposure to the direct rays of the sunwould destroy these germs independently of the disinfecting power or germicidal action of the luminous rays or the fatal results of desiccation.

Other disease germs require a higher temperature for their destruction. The typhoid bacillus and the bacillus of diphtheria are killed by exposure to a temperature of 140 degrees F. for ten minutes. In general, it may be stated that this temperature is fatal to all the most important disease germs. The facts stated furnish a scientific basis for practical disinfection, and it is evident that when sunshine is available no chemical agents are essential To get your old carpet manufac-tured into beautiful durable rugs at prices that are right. Call and see samples. Factory opposite Piggott & Sons lumber office in J. & J. Olderfor the destruction of disease germs. Any article of food or drink which has been heated for a few minutes to something near the boiling point of water is absolutely safe, so far as any danger from disease germs is concerned, and any article of clothing which has been put through the ordinary operations of the laundry is as safe as if it had been placed for an hour in an expensive steam disinfector or immersed

Notice is hereby given that I have prepared a list of lands for sale for arrears of taxes, copies of which can be had in my office, and that the said list is being published in the Ontario Gazette in four consecutive issues thereof, the first insertion bearing date July 28th, 1902, and that in the default of payment I shall proceed to in a strong disinfecting solution. It will be seen that scientific investigations fully justify the practice of good housewives, who at frequent intervals expose their blankets and articles of woolen clothing, which cannot be placed in boiling water without indate July 26th, 1902, and that in the default of payment I shall proceed to sell by public auction on 26th day of August, 1902, at 10 o'clock a. m., at the City Council Chambers, all lands published in said list, upon which the arrears have not been paid. jury, to a prolonged sun bath, who scald out milk pans and kitchen utensils and place them in the sun to dry and who open up their sleeping apartments for the admission of sunlight and fresh air -Surgeon General Sternbeen in Youth's Companion.

#### "NEWFOUNDLAND."

Sir Cavendish Boyle, Governor of New-foundland, recently wrote the following peem on "Newfoundland," which may soon be a new Province of Canada, for

The St. John's Week'y News:
When the sun rays crown thy pine-clad
hills.
And summer spreads her hand;
When slivern voices tune thy rills,
We love thee, smiling land.

When blinding storm gusts fret thy shore And wild waves lash thy strand; The spindrift swiri and tempest roar, We love thee, wind-swept land. When spreads the cloak of shimme

white,
At winter's stern comman 1;
Thru shortened day and starlit night,
We love thee, frozen land. As loved our fathers, so we love, Where once they stood, we stand; Their prayer we rake to heaven above. God guard thee, Newfoundland.

MR. ST. JOHN BRODRICK.

Presentation to British War Secretary

Broderers' Com; any. In recognition of "his distinguished patriotism amidst many chieu. ties," Mr. St. John Brodrick, British Secretary for War, was recently presented with the honorary ficedom and livery of the Broderers' Company. It is stated that Mr. Brodrick's family have been associated with the Broderers' Company since 1620, when one William prodrick left a sum of money for the re-The presentation was made in a handsome casket. The Broderers' Company, The London Chronicle explains. is one of the very lew Livery Companies which distinguished themselves by declining to render an account of their property to the London Livery Companies Commission of 1880. The company to-day consists of three and thirty gentlemen who go to make up the court and livery of the Broderers' Company, and, though it declines to give any lief of poorer members of the guild. and, though it declines to give any account of its present income, most sane men can guess the approximate value to-day of a messuage and two cottages in Cutter Lane, valued when left in 1568 at \$2 16s. 8d. annually. Among other Broderers, or Embroiderers whom the new Broderer will meet in his company his father, Lord Midleton, and Viscount Horncastle, C.C., and Aldermen Evans and Wilkin, and some thirty other gentlemen who "Brod-er" in a Pickwickian sense indeed. Each member of the court receives two guineas for each attendance upon court business. Their Latin mot-to: Omnia de super—"All things from above"—is really, to such as know what "Brodering" is, one of the finest instances of a "canting"

motto. Century of British Steamships. Few centenaries are better deserving of commemoration within the United Kingdom than the centenary of steam navigation. And it was just in the close of March, 1802, that the Charlette Dundas, the first steamer ever employed for practical purposes began to tow barges on the Forth, and Clyde Canal. Steam vessels had been tried on Dalswinton Loch with success as early as 1878, but they were not intended for use, only for experiment. There were only one or two dreamers, like William Symingthe Comet # 1812, who had any idea that steam navigation could ever be turned into practical use: The owners of the Clyde and Forth Canal promptly took steps to stop the running of the Charlotte Dundas est her wash should injure the banks of the canal, and it is even on reord that James Watt, the true inpenalties if his engine should prove a steam to the conveyance of cargo by

entor of the steam engine, threatned William Symington with legal cess. So the first application of vater ended in financial ruin to the uen who had invested his all in it. The first passenger steamer was ot much more successful from a financial point of view than the steam tug. Henry Bell applied for id to the Government of the day in der that his idea that warships could be driven by steam might be ractically tested. It was in 1800 when a steam battleship in the hands Nelson might have done much But no help came from the Govern-Nor did private capitalists ment. think that there was anything to be made by applying steam to the transport of passenger vessels. So Henry Bell struggled on as best he could and in 1812 the first passenger steamer appeared on the Clyde. She took her name, the Comet, from the great comet of 1811. She proved that steam navigation was possible for passenger boats, but she ruined her owner, who died impoverished at Helensburgh, on the Clyde, in 1830.— London Daily Graphic.

Missionaries in India encounter no ittle difficulty in explaining eachings of Christianity so that the will understand them as natives ome of the most beautiful passages of the Bible are rendered almost lu-dicrous by translation. A returned missionary tells The Buffalo Comnercial of the efforts of a young Hindu Bible student to render

Rock of Ages, cleft for me, Let me hide myself in thee, nto the native dialect. The result of his laborers, translated back into English, was about like this: Very old stone, split for my benefit Let me absent myself under one of your fragments.

How Interesting.

The aristocratic clientele of a pro of dogs-p fessional trimmer principally-have, he says, already given him coronation comm for their canine pers. The for their canine pets. The dogs coats are to be cut and trimmed so as to show up designs in crowns, the Royal initials, E.R. and A.R., owner's initials, and I know not what. So "Bootlaces," as I once heard a London street urchin contemptuously style a long-haired, unshorn poodle, is destined to play his part in the coronation festivities.—Sheffield Telegraph.

## MILWAUKEE PEOPLE

Could Hardly Believe It. A
Prominent Woman Saved From
Death by Lydia E. Pinkham's
Vegetable Compound.

"DEAR MRS. PINKHAM:—I suppose a large number of people who read of my remarkable cure will hardly believe it; had I not experienced it myself, I know that I should not.

MRS. SADIE E. KOCH. "I suffered for months with troubles peculiar to women which gradually broke down my health and my very life. I was nearly insane my very life. I was nearly insane with pain at times, and no human skill I consulted in Milwaukee could bring me relief.

Such unquestionable testimony proves the power of Lydia E. Pink-ham's Vegetable Compound over

diseases of women.

Women should remember that they are privileged to consult Mrs. Pinkham, at Lynn, Mass., about their illness, entirely free.

I sometimes admit that there may be good men in other churches than my own, but it is strange how they can be so misguided.

WIRE WOUNDS. My mare, a very valuable one, was badly bruised and cut by being caught in a wire fence. Some of the wounds would not heal, although I tried many would not heal, although I tried many different medicines. Dr. Bell advised me to use MINARD'S LINIMENT, diluted at first, then stronger as the sores began to look better, until, after three weeks, the sores have healed, and best of all, the hair is growing well, and is not white, as is most always the case in horse wounds.
