

FAUNA OTTAWAENSIS.

HEMIPTERA.

By W. HAGUE HARRINGTON, F.R.S.C.

During the past season insects belonging to the Hemiptera appeared to be more than usually abundant, and this seemed especially to be the case with those belonging to the division Homoptera. Many species formerly scantily represented in my collections occurred in abundance. Altogether I collected one hundred species, of which about one-fourth prove to be additions to the lists previously published. Through the renewed kindness of Mr. Van Duzee I am able to furnish a list of these, although several of the species could not be named at present. In recording these species I take the liberty of adding, in some instances, Mr. Van Duzee's remarks on the specimens. I include also three additional species of *Aradus*, formerly sent to Mr. Van Duzee, and referred by him to Dr. Bergroth for determination.

HETEROPTERA.

Geocoris borealis, *Dall.* Aug. 25th, Kettle Island.

Melinna modesta, *Uhl.* July 23rd, Hull; 28th, Kettle Island.

Psallus sp. July 8th, Hull, common. "No. 9 is very common here (Buffalo). I have sent examples to Dr. Uhler, which have come back unnamed."

Plagiognathus obscurus, *Uhl.* July, 8th, Hull, two specimens.

Pilophorus amœmus, *Uhl?* July 21st.

CAPSIDÆ sp. July 29th, Hull. New to Mr. Van Duzee.

CAPSIDÆ sp. Aug. 18th, Kettle Island. Also new to Mr. Van Duzee.

CAPSIDÆ sp. Aug. 18th and 25th, Kettle Island; common. A pretty species with red markings, which has received from Dr. Uhler the ms. name of *Neoborus letus*. "No. 7, I think, has never been described; the name was received from Dr. Uhler; it is common here on *Ligustrum*."

Triphleps latulus, *Reut?* Aug. 13th.
