

whole. For this reason I venture to believe that a concise manual, dealing with all the hydra heads of tuberculosis in one volume, will form a work of reference of some interest and value to practitioners of medicine and medical students. It is for them that this work is primarily intended. Tuberculosis is the Nemesis of overcrowding, of squalor, of departure from the conditions of a healthy animal life. Immunity from tuberculosis is a large portion of the reward which a community may hope to derive from good sanitation, from light, from air, from all that is sound in the progress of civilization, and all that is conducive to the material and moral welfare of the masses. It is thus a social as well as a medical problem."

---

*The American Year-Book of Medicine and Surgery.* Being a yearly digest of scientific progress and authoritative opinion in all branches of medicine and surgery, drawn from journals, monographs, and text-books of the leading American and foreign authors and investigators. Under the general editorial charge of GEORGE M. GOULD, M.D., in two volumes. Vol. I. Surgery. Philadelphia: W. B. Saunders. 1900. Canadian Agents: J. A. Carveth & Co., Toronto, Ont. Price, \$3.00 per vol., cloth; \$3.75 per vol., half morocco.

The Year Book for 1900 is issued in two volumes in order to make it less tiresome to hold, and for the convenience of specialists. Vol. I. contains General Surgery, Obstetrics, Gynecology, Orthopedic Surgery, Ophthalmology, Otology, Rhinology, Laryngology and Anatomy. The portion of the volume devoted to Surgery is particularly good. It covers 220 pages and reviews papers written and work done in Asepsis and Antisepsis, Cysts and Tumors, Anesthetics, Surgery of the Esophagus, Stomach, Intestines, Peritoneum, Hernia, etc.

The work of this part is simply invaluable to Surgeons, as indicating what is being done in other parts of the world. To Obstetrics seventy-five pages are devoted under the charge of Barton Hirst and Dorland. To Gynecology eighty-five pages. Kelly's article in the *Johns Hopkins Bulletin*, and Baldy's in the *Philadelphia Medical Journal*, on "Perineorrhaphy," are fully reviewed and illustrated by three handsome plates.

This volume is really an excellent *résumé* of the best work done in the subjects referred to.
