### Questions and Answers. Miscellaneous.

#### Killing Granary Weevils.

Have you ever had any experience with granary weevil? They have been working in my wheat and barley. I would like to know of some good way to get rid of them.

W. H. F.

Ans.—Use carbon bisulphide as outlined in the article on "Killing Grain Insects," in our issue of April 22, page 672.

#### Keeping Pork.

Let me know, through your valuable farm paper, whether you have a recipe for keeping pork killed this time of year, as we have not been very successful with ours. Would covering in brine be sufficient?

A. P.

Ans.—The pork would keep in a good brine. It is commonly known as the wet salting process. Make the brine of a strength strong enough to float an egg. The meat may be left in this brine until it is cured through, when it may be hung up and smoked, or it may be left in a strong brine until ready to be used. There are a number of different methods, and the flavor of the meat is sometimes influenced by the adding of spices to suit the individual taste.

#### Tuberculin Testing—Pruning Spruce.

I have been a constant reader of "The Farmer's Advocate" for years, and have had much valuable information from it. I would like you to answer the three following questions for me:

1. How much per head should a veterinary surgeon charge for tuberculin-testing cattle?

2. Would it be harmful to have a cow tuberculin tested a week before her time is due to calve?

3. When is the best time to prune spruce trees?

J. J. C.

Ans.—1. We do not know that there is any set price.

2. It might or might not injure her. It would be safer to leave her until after parturition, and until she had become normal again.

3. Early in the spring before growth begins.

#### Veterinary.

##### Lame Bull.

Two months ago my six-months-old bull became lame on hind leg. I let it go for a while, and he not getting any better, I blistered the joint, but this has done no good. He does not touch his foot to the ground. Ordinarily it just hangs, but when he moves he draws it upwards, but does not seem to be able to fetch it forward of the other leg, or to put the slightest weight on it.

T. L. D.

Ans.—It would be wise to get your veterinarian to examine him, as lameness of this kind is very hard to diagnose. The symptoms indicate a fracture of one of the bones of the pelvis, and all that can be done is keep him as quiet as possible in a comfortable box stall. Local applications will do no good.

V.

##### Enlarged Hock.

1. Filly was kicked in front of hock last winter. The wound healed, but there is an enlargement, and the leg swells at night.

2. Roosters head was drawn upwards and backwards on its back, and he would tumble over backwards. He did not eat for about two weeks, when he died.

S. B.

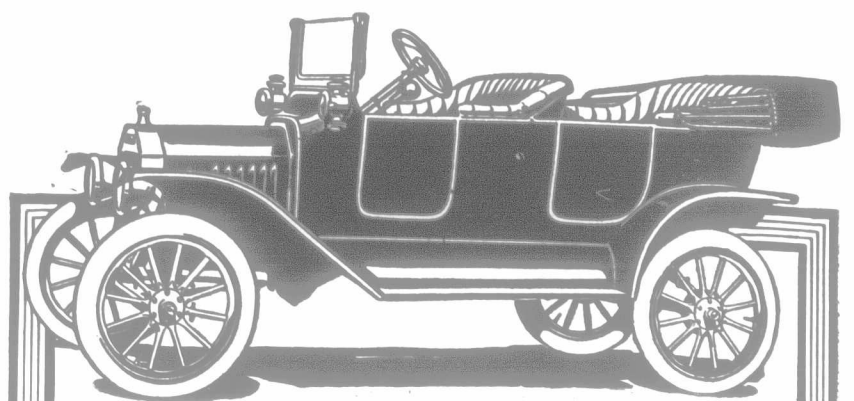

Ans.—1. Get a liniment made of four drams each of iodine and iodide of potassium, and four ounces each of alcohol and glycerine. Rub a little well in once daily, and work for every day. Apply a wooden bandage to the leg below the hock when she is standing in the stable.

2. The rooster's head was drawn upwards and backwards on its back, and he would tumble over backwards. He did not eat for about two weeks, when he died.

V.

Are you going to have a garden this year?

No, I don't. I don't want to. It isn't my business to have a garden. I'm going to keep my hens this year and let my neighbors have the garden.

"MADE IN CANADA"

## Ford Touring Car Price \$590

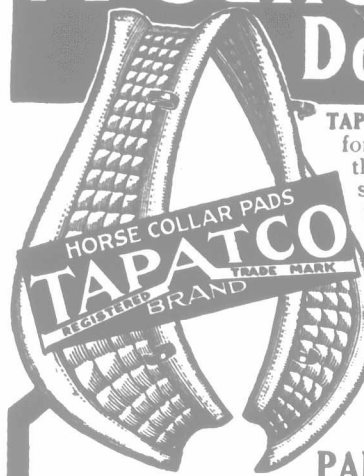

Your neighbor drives a Ford—why don't you? We are selling more Fords in Canada this year than ever before—because Canadians demand the best in motor car service at the lowest possible cost. The "Made in Canada" Ford is a necessity—not a luxury.

Buyers of Ford cars will share in our profits if we sell 30,000 cars between August 1, 1914 and August 1, 1915.

Runabout \$540; Town Car \$840; F.O. B. Ford, Ontario, with all equipment, including electric head-lights. Write Ford Factory, Ford, Ontario, for Catalogue E.

## A Galled Shoulder Doubles the Load

TAPATCO scientific, humane collar pads end trouble for you and pain for your horses. They fill up the hollow places that come in neck and shoulders as soon as your sleek horses are put to work in spring. TAPATCO Pads

#### Make Any Collar Fit Snugly

Made from start to finish right in our own shops. We even make our own cotton drilling and do our own dyeing. TAPATCO pads are porous. They permit ample ventilation and absorb all sweat. Filled with our own Special Composite Stuffing. Light, soft, springy and very absorbent. No dirt, no trash, no short, cheap, lousy hair with hide attached to attract rats and mice.
