

WHAT SOLDIERS NEED

(Somehow in Belgium)

Cigarettes + tobacco are rather scarce. Money is worth as to what to send to men, always depend on Zam-Buk + Socks. Buy a couple of Zam-Buk is much in demand for blisters, heels, barbed wire cuts, + summer sore places + injuries. Yours truly, A. Brooks, (Capt) 7th Battalion.

When you send parcels to the front, don't you want it to contain just what your friend most needs? Read this letter and take the hint! Nothing ends pain like Zam-Buk, and prevents festering. Remember, too, it is just as useful in your home. Mothers should always keep it handy for it is a sure cure for eczema, ulcers, piles, and skin diseases generally.

Especially suitable for the skin troubles of young children. All druggists sell boxes.

ZAM-BUK

FREE BOOK: Send this ad to: Mrs. J. H. B. 100 St. George St. Montreal, P. Q. and we will send this box.

FINANCING THE WAR FROM OUR OWN POCKETS

Canada's Splendid Record—The Success of the Four Preceding War Loan Floatations.

During the first year of the war Canada was content to secure needed money elsewhere, but as the conflict lengthened and other nations felt the financial pinch the dictates of necessity, as well as self-respect, demanded the flotation of loans at home. The business of raising war loans since then has been of increasing importance. The first domestic war loan, issued in November, 1915, was immediately successful, resulting in bank subscriptions of \$25,000,000 and public subscriptions of \$78,729,500, a total of \$103,729,500. This in face of an objective of but \$50,000,000 was most gratifying.

By the following summer another domestic loan was needed, and a call for \$100,000,000 brought in \$291,444,800, of which \$50,000,000 was from the banks and \$151,444,800 from the public. In March, 1917, the third Canadian war loan was floated. The call was for \$150,000,000 and \$260,768,000 was realized, of which \$60,000,000 was from the banks and the balance from the public. It will thus be seen that the part played by the public greatly increased in each new issue.

The greatest success was in November, 1917, when the fourth loan was triumphantly floated. The request again was for \$150,000,000, and all from the public, but the subscriptions amounted to \$419,289,000. The interest of the public was demonstrated in remarkable degree, for while there were 24,862 subscribers to the first loan, 34,526 to the second, and 40,800 to the third, in the fourth no fewer than 820,035 subscribers were registered, or one in every 9.62 of the population of the Dominion.

Ontario headed the list of the provinces, as was natural with her large population. Her 863,000 subscribers were responsible for \$204,185,400, compared with \$94,287,250 from 126,534 subscribers in Quebec, \$32,326,000 from 78,856 subscribers in Manitoba, \$21,777,050 from 73,675 subscribers in Saskatchewan, \$18,814,700 from 50,563 subscribers in British Columbia, \$18,588,150 from 37,521 subscribers in Nova Scotia, \$16,515,150 from 56,117 subscribers in Alberta, \$10,463,350 from 26,469 subscribers in New Brunswick, and \$2,311,350 from 5,300 subscribers in Prince Edward Island. Manitoba slightly led with a subscription from one in every seven people in the province.

WOMEN ON BRITISH FARMS.

There are now about 270,000 women working on farms in Great Britain.

Save the food and help the fighter fight.

The least expensive meats rival in tastiness the most expensive roasts by the addition of

THE STORAGE OF POTATOES.

(Experimental Farms Note.)

The losses from improper storage of potatoes are of far greater economic importance than is generally realized. These losses are brought about by a variety of factors which may be grouped in three divisions, i. e. Physical, Mechanical and Pathological.

The chief loss from physical factors is brought about by the storage of immature stock. Potatoes that are to be stored should be thoroughly ripe, that is, the stalks should be dead, and the tubers should adhere firmly to the stems, potatoes may have their stalks prematurely killed so as to resemble a natural death by being attacked by the late or early blight, rhizoctonia, flea beetle or potato bug, but upon examination the tubers under such plants will be found immature and unfit for best storage results. Frost bitten and sunburned also come in this division.

The mechanical factors that bring about loss in storage are chiefly from rough handling, from carelessness in handling, from careless handling of the crop at harvest time, such as breaking, cracked or chipped tubers, due to improper digging and rough usage in gathering the crop. The slightest injury to the skin of the potato lays it open to invasion of myriads of decay producing spores, which, when given the proper conditions, will rapidly spread decay through the entire lot.

Under the pathological factors come the tubers affected by disease. Undoubtedly the late blight (*Phytophthora infestans*) is the most common, as well as the most destructive. Tubers affected by this disease are almost certain to decay in storage; no one can expect them to survive carefully stored, but spreads rapidly to the healthy ones, unless preventive measures are employed, and perfect storage provided.

The decay of potatoes in storage may be caused by a number of organisms, while each organism may have its own particular form of attack, still it is gratifying to know that the remedial measures are the same in each case.

The following suggestions regarding the storage of potatoes, if followed carefully, will practically eliminate the losses from decay of potatoes in storage.

1. Spray your potatoes frequently and carefully during the summer with Bordeaux mixture.
2. Delay digging your potatoes, if a possible, until the tops are dead and dry.
3. Avoid covering potatoes, after they are dug, with the tops, to protect them from sun or frost.
4. Carefully examine all potatoes to be stored, and remove immature, broken, cracked, chipped, sun-bitten, frost-bitten or diseased tubers.
5. Never store your potatoes while wet.
6. Have the tubers free from dirt. If dirty the soil fills up the spaces between the tubers and prevents the circulation of air.
7. Provide a dry cellar with abundant ventilation, where the temperature can be between 34° and 40° F.
8. Keep the storage room as cool as possible directly after the product is stored.
9. Fill your bins gradually; by so doing the potatoes that are put in first have lost their heat before they are covered by another layer.
10. Carefully sort your stored potatoes at intervals during storage, and remove all tubers showing signs of disease or decay.

LIEUT. GOVERNOR OF QUEBEC HAS PASSED AWAY

Sir Evareste LeBlanc Died at His Residence, Spencerwood, Quebec, At 11.58 O'clock Friday Night.

Quebec, Oct. 18.—After a lingering illness of His Honor the Lieutenant-Governor Sir Evareste LeBlanc passed away at his residence, Spencerwood, at 11.58 o'clock tonight. He was born in 1854, graduated from McGill University and was admitted to the bar in 1870. He was a Conservative in politics and represented Laval County in the Quebec Legislature from 1882 to 1908, being Speaker of the House from 1892 to 1897 and leader of the Opposition from 1904 to 1908. He was appointed Lieutenant-Governor in 1915 and in 1916 was created Knight-Commander of St. Michael and St. George.

He is survived by his wife, Lady LeBlanc and three children Mrs. Costa, of Buenos Ayres, Captain Beaudry LeBlanc, and Mrs. J. A. Perreault, of Montreal.

SAVE YOUR WOOD—ASHES (Experimental Farms Note.)

The experience of many generations of farmers and gardeners has proven the high value of unleached wood-ashes as a fertilizer, especially for clover, corn, farm roots and vegetables and fruit crops generally. Wood-ashes are rich in potash, phosphoric acid, lime, sulphur, and iron, and when returned to the soil they will supply, in the very best form and combination, the mineral nutrients required by our crops.

According to analyses made by the Division of Chemistry, Experimental Farms, unleached hard-wood ashes, free from loss in storage are chiefly composed of 3 and 4 per cent of potash, about 2 per cent of phosphoric acid and from broken, cracked or chipped tubers, due to improper digging and rough usage in gathering the crop. The slightest injury to the skin of the potato lays it open to invasion of myriads of decay producing spores, which, when given the proper conditions, will rapidly spread decay through the entire lot.

Under the pathological factors come the tubers affected by disease. Undoubtedly the late blight (*Phytophthora infestans*) is the most common, as well as the most destructive. Tubers affected by this disease are almost certain to decay in storage; no one can expect them to survive carefully stored, but spreads rapidly to the healthy ones, unless preventive measures are employed, and perfect storage provided.

The decay of potatoes in storage may be caused by a number of organisms, while each organism may have its own particular form of attack, still it is gratifying to know that the remedial measures are the same in each case.

The following suggestions regarding the storage of potatoes, if followed carefully, will practically eliminate the losses from decay of potatoes in storage.

THIS WOMAN SAVED FROM AN OPERATION

By taking Lydia E. Pinkham's Vegetable Compound, One of Thousands of Such Cases.

Black River Falls, Wis.—"As Lydia E. Pinkham's Vegetable Compound saved me from an operation, I cannot say enough in praise of it. I suffered from organic troubles and my doctor told me so I could hardly be up from my bed and I was unable to do any housework. I had the best doctors in Black River Falls and they wanted me to have an operation, but Lydia E. Pinkham's Vegetable Compound cured me so I did not need the operation, and I am telling all my friends about it."—Mrs. A. W. Binz, Black River Falls, Wis.

It is just such experiences as that of Mrs. Binz that has made this famous root and herb remedy a household word from ocean to ocean. Any woman who suffers from inflammation, ulceration, displacements, leukorrhoea, nervousness, irregularities or "the blues" should not rest until she has given it a trial, and for special advice write Lydia E. Pinkham Medicine Co., Lynn, Mass.

SOUR, ACID STOMACHS, GASES OR INDIGESTION

"Pape's Diapasin" neutralizes excessive acid in stomach, relieving dyspepsia, heartburn and distress at once.

Time it! In five minutes all stomach distress, due to acidity, will go. No indigestion, heartburn, sourness, or belching of gas or eructations of undigested food, no dizziness, flatulence, bad breath or headache.

Pape's Diapasin is noted for its speed in regulating upset stomachs. It is the surest, quickest stomach remedy in the whole world, and leads to a harmless, put an end to stomach distress at once by getting a large percentage of Pape's Diapasin in any drug store. You realize in five minutes how needless it is to suffer from indigestion, dyspepsia or any stomach disorder caused by fermentation due to excessive acids in stomach.

BEAUTIFY THE SKIN

Make it a beauty lotion cheaply for your face, neck, arms and hands.

At the top of a small jar of beauty cream, you will find a small red ribbon. This is the mark of the most beautiful skin cream ever made. It is the mark of the most beautiful skin cream ever made. It is the mark of the most beautiful skin cream ever made.

Laugh When People Step on Your Feet

Try this yourself then pass it along to others. It works!

Ouch! Ouch! This kind of pain talk will be heard less here in town if people troubled with corns will laugh the simple advice of this eminent authority, who claims that a few drops of a drug called Frezome when applied to a tender, aching corn stops soreness at once, and soon the corn dries up and lifts right out without pain.

He says Frezome is an ether compound which dries immediately and never inflames or even irritates the surrounding tissue or skin. A quarter of an ounce of Frezome will cost very little at any drug store, but is sufficient to remove every hard or soft corn or callus from one's feet. Millions of American women will welcome this announcement when the inauguration of the high heels.

When will it end?

Thousands upon thousands, endless thousands, hold their lives cheap as the price of Victorious Peace.

And we—as we watch from afar their heroic efforts—may we be able to say, that the little we at home could do, we have done;

—that in so far as we could support them, lighten their burdens, bring them comforts, we have done it;

—that we have striven unceasingly to shorten their stay in the Hun made Hell;

—that freely, fervently, unitedly, we have laid our humble offerings alongside their noble sacrifices on the altar of Victory—and Peace.

Another opportunity to lend your individual weight to the blow that will shorten the war comes with the offering of Victory Bonds about to be made. Let not the privilege to do your share find you unprepared.

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.
