

## Be on Guard against Inferior Goods

Some things never seem to pass into the realm of certainty. With Silverplate that bears the brand of this factory we have an illustration of opposite conditions. The degree of perfection, beauty of design, and durability of wear that marks every piece of Silverware from this factory, is something around which there never clusters a doubt. The brand is a guarantee of the highest in manufacture in this particular line. Insist that your dealer gives you Silverplate marked Standard.

## SUNSHINE FURNACE

Sunshine grates never break because they are made of extra heavy bars with thick, short bull-dog teeth—the kind that break clinkers—but never break themselves.

Bars are so thick that not even white heat can twist or warp them.

Teeth are set to squeeze and break clinkers, but coal is squeezed and forced upwards. There is no waste coal in a Sunshine ash tray.

The Sunshine Furnace is the strongest furnace built—it weighs less than any other furnace of equal heating capacity.

Sold by all Enterprising Dealers.

Write for Booklet.
