

THE PLACE OF PAINT IN MODERN CIVILIZATION

Now is the Time to Paint

PAINT protects and beautifies your property. It is an economy not an expense. It keeps your property looking well, and prevents the destructive action of the elements on wood and metal. A few dollars spent on painting every four or five years, mean a saving of many dollars worth of repairs a little later.

PRISM READY MIXED PAINT

is a satisfactory paint. It is made of good materials thoroughly mixed. It is a long-wearing paint at a moderate price. Call and see us and let us talk to you about your painting.

Your Oven Gains

by Our Oven Test

Your oven becomes a certain producer of more bread and better bread.

We can promise that.

PURITY

For from each shipment of wheat delivered at our mills we take a ten pound sample. We grind it into flour. We bake the flour into bread.

If this bread is high in quality and large in quantity, we use the shipment. Otherwise we sell it.

There is no guess-work about our promise of more bread and better bread from flour bearing this name.

"More Bread and Better Bread" and
"Better Pastry Too"

THE SANITARY FEATURES CONNECTED WITH PAINT

Paint has become recognized as one of the greatest germ eliminators—Properly treated surfaces easily cleaned and kept free from vermin.

Paint has come to be recognized as one of the great germ eliminators and its use has been generally advocated by health officers and those interested in the public welfare. Besides brightening up dwellings and adding an appearance of thrift to the surroundings, new paint kills disease germs. A well painted floor has many advantages over the old rough surfaces. The surface is smoothed out by the paint, and besides the turpentine and other materials in the paint killing insects and germs, the pores of the wood and cracks become filled and thus eliminate to a great extent the breeding places of vermin.

Paint, freely applied to floors, has the property of rendering them almost germ proof, while at the same time giving them a coating that is easily cleaned, and the filling of the cracks with proper materials gives a smooth surface in which there is no housing for germs.

Plenty of paint around sinks and water pipes prevents the woodwork from becoming waterlogged and helps to keep the premises free from moths and water insects.

Walls and ceilings properly coated with paint have surfaces that give little chance for the accumulation of dirt. Painted surfaces are generally waterproof and are easily washed down and kept clean.

Floor Treatment.

An expert painter, who has shown an interest in painting from a sanitary standpoint as well as from the business point, gives the following method for the renovating of old floors:

If there be traces of the old paint or varnish on the boards, scrub thoroughly with warm water and soda to get every bit of it out of the grain of the wood. Then go over the floor with borax water. Finally wash with clear water and let it dry thoroughly. When completely dry take one gallon of boiled linseed oil, best quality, and two heaping tablespoonsful of burnt umber. Heat the oil in an iron kettle. Then stir in the finely powdered umber, and with a paint brush apply it as hot as possible. When dry the floor does not need scrubbing.

HARTLAND NEWS

Hartland, N. B., May 16.—The country roads are drying up pretty fast and travelling is not now such a task as it has been for the past few weeks. The merchants here are commencing to feel the benefit of the increased travel and the farmers have a more hopeful feeling regarding the planting of their crops and the ultimate reward of their labors.

The hook of the auto is again heard in the land and with the continued improvement in the roads travel by this means will be on the increase. Quite a number of new machines have been placed in the county, all going to show the prosperity of the farming community and the efforts of the tillers of the soil to keep abreast of the times.

At Wicklow the other day Edwin R. Squires, an old and much respected resident, was stricken with paralysis. Not much hope is held out for his recovery. Mr. Squires was parish councillor for Wicklow for a number of years.

Mrs. John Glass of Windsor, went to Fredericton on Wednesday to attend the graduation exercises at the University of New Brunswick, when her son-in-law, Robert Simms, will be one of the graduating class.

The Woodland Hotel at Bristol has been placed under the management of Mr. William Martin and he and his family will take up their residence there at once.

Mrs. J. R. H. Simms of Bath, who has been ill for some time, is recovering.

Pneumonia has laid low one of the old residents of Bath in the person of Mr. Albert Demerchant.

Rev. J. R. Hopkins of Andover, who has been spending some time with his daughter, Mrs. Burns, at Collingwood, Ont., has returned home. While away Mr. Hopkins visited friends in Ottawa.

At Andover last week there was a large attendance at the agricultural meeting. Several speeches were made by local farmers and an interesting and instructive address was delivered by Mr. J. B. Daggett. Much interest was manifested in the proceedings.

Miss Helen Murphy, who has been spending a few months with her sister, Mrs. W. C. Moore, at West St. John, has returned to her home in Andover.

A very pleasant dinner was given at the Dionne Hotel, Perth, on Sunday by Messrs. Watney Wade and Walter Scott. The guests were Mr. and Mrs. J. F. Johnson, Dr. and Mrs. Earle of Perth, Mr. and Mrs. H. L. Alcorn and Mr. and Mrs. D. R. Bedell of Andover.

A large lot of logs that had been cut from the Indian reservation last winter and yarded at Andover went adrift the other night owing to the rapid rising of the water in the river. The water in the river has been falling rapidly for the last couple of days and fears relative to the bridge pier are somewhat allayed. Lumbermen, however, would much prefer the higher water for their driving operations. Already a considerable number of logs are hung up along the shores and this means much more work than if the water remained high.

At the home of Mrs. Scott-Slipper the other evening the ladies of the W. C. T. U. gave a very enjoyable parlor social. There was a good program of refreshments were served.

At Bath on Wednesday and Thurs-

A mop wrung out of warm water will clean it nicely. The amount of oil and umber given will apply two coats for a floor fourteen to sixteen feet square. For one coat take about half the amount. Total cost of the two coats about ninety cents. A good floor was made by melting a scant half pound of beeswax, set in a pan of hot water. Add gradually, stirring well, a quart of turpentine, and when mixed, a half cup of ammonia. Cover the saucpan containing it closely and set the outer vessel of hot water at the back of the stove to heat for ten minutes. Apply warm with a piece of flannel and polish with a rough cloth.

This method, it is said, will produce a fine surface, and one that is easily kept clean.

Good For Cellars.

For cellars, outhouses and barns, good whitewash is said to be one of the best germ killers and purifiers known. Practically any of the formulas that are generally followed will produce a good whitewash, and a small amount of carbolic acid added will help to exterminate germs. In using whitewash care should be taken to have the liquid reach all parts of the surface and sink well into the cracks and crevices.

Whitewashing should be done at least twice a year, and other cleaning should be done as often.

The painting of the outside of the houses is also another important matter, and this work should not be neglected. Water troughs should be cleaned out and painted. Water should not be allowed to remain in any part of these, for, besides causing the wood and metals to decay, it also forms an ideal breeding place for mosquitoes and flies. Many of the mosquitoes and flies found around dwellings may be traced to these defective water-spouts and drains.

It has also been considered necessary for all wooden roofs of the sloping variety to be well painted. Paint adds greatly to the life of the covering besides making the materials waterproof. It has also been said that well painted roofs will not ignite as quickly as the bare wood.

day afternoon, May 20 and 21, Mrs. Geo. Melsner, formerly Miss Celia Giberson, will be at home to her friends.

Miss Marion Stevens, R. N., has been visiting friends in Woodstock.

On Monday the 25th all the stores in Hartland will be closed in celebration of Victoria Day. In the evening Brighton Lodge No. 31, Knights of Pythias, will give a social entertainment in honor of Rev. P. A. Fitzpatrick, Rev. S. W. McWhannan and Mr. Thos. B. Thistle, members of the lodge, who are shortly to leave here for other fields of labor.

Miss Mildred Brown, who has been for some time with sister and brother here, left on Thursday for her home in Boiestown. The other evening Mrs. A. W. Kyle entertained a number of young people in her honor. After a visit to her home Miss Brown will go into training for a nurse.

Dog poisoning has become such a bad habit that the local authorities have offered rewards of \$25 each for information that will lead to the conviction of those guilty of this destructive pastime.

A considerable delegation of the Knights of Pythias from Ivanhoe lodge at Woodstock was here on Thursday to attend the funeral of their late brother, Donald W. Foster.

To Cure Catarrhal

Deafness and Head Noises.

Persons suffering from catarrhal deafness and head noises will be glad to know that this distressing affliction can be successfully treated at home by an internal medicine that in many instances has effected a complete cure after all else has failed. Sufferers who could scarcely hear a watch tick have had their hearing restored to such an extent that the tick was plainly audible seven or eight inches away from either ear.

Therefore, if you know someone who is troubled with head noises or catarrh, or catarrhal deafness, cut out this formula and hand to them and you will have been the means of saving some poor sufferer perhaps from total deafness. The prescription can be prepared at home and is made as follows:

Secure from your druggist 1 oz. Peppermint (Double Strength), about 75c worth. Take this home and add to it 14 pint of hot water and 4 oz. of moist or granulated sugar; stir until dissolved. Take one tablespoonful four times a day.

The first dose promptly ends the most distressing head noises, dullness, cloudy thinking, etc., while the hearing rapidly returns as the system is invigorated by the tonic action of the treatment. Loss of smell and mucus dropping in the back of the throat are other symptoms that show the presence of catarrhal poison, and which are quickly overcome by this efficacious treatment. Nearly ninety per cent. of all ear troubles are directly caused by catarrh; therefore, there are but few people whose hearing cannot be restored by this simple home treatment. Every person who is troubled with head noises, catarrhal deafness, or catarrh in any form should give this prescription a trial. There is nothing better.

Important—In ordering Peppermint always specify that you want Double Strength; your druggist has it or he can get it for you. If not, send 75c. to social. There was a good program of refreshments were served.

At Bath on Wednesday and Thurs-

A Paint for the Floor

**That Wears—
And Wears—
And Wears.**

THERE are many kinds and many colors in Floor Paint—but the old reliable SENOUR'S FLOOR PAINT is the "daddy" of them all.

"Way back in your grandfather's time," SENOUR'S FLOOR PAINT was standing the wear and tear of pioneer days—today, it is beautifying and protecting the floors in the finest homes of our country.

It Survived—because it stands the scuff
—because its beautiful colors are lasting
—because it wears, and wears, and wears.

If you want sanitary floors—floors that are easily kept spic and span—come in and get a color card of Senour's Floor Paint, showing 14 attractive colors from which to make your choice.

How Goodyear Fights Loose Treads

After we ended rim-cutting we took up loose treads—another major tire trouble. At the base of the tread in every tire there must be a breaker strip. In all tires save Goodyears this strip is made of closely-woven fabric. And road use often separates this breaker strip from the rubber.

We bought the rights to a patent fabric which we picture here. It cost \$50,000, and it forms our breaker strip. During vulcanization, hundreds of large rubber rivets are formed.

This lessens by 60 per cent the risk of tread separation. And no other maker employs it.

Millions Saved
That is one way in which we save tire users millions of dollars yearly.

Another is our "On-Air" cure. No-Rim-Cut tires are final-cured on

air bags, under actual road conditions. This saves the countless blow-outs due to wrinkled fabric. This extra process adds immensely to our manufacturing cost. And no other maker employs it.

In these tires alone is rim-cutting ended in a satisfactory way. We control the method.

And these tires alone have our double-thick All-Weather tread—a smooth-running anti-skid.

18 Makes Cost More
No-Rim-Cut tires are the only tires embodying these costly features.

After years of tests on countless cars they have come to outsell any other tire in the world.

Yet there are 18 U. S. and Canada makes of tires which sell at higher prices. Some nearly one-half higher. Three such tires cost as much as four Goodyears. That's a curious situation.
