

above and below. It was found by Mr. Chance in Markham township, and now forms part of the G. E. Laidlaw collection.

FIG. 117. (Quarter Size).

This diagram represents what is the largest, and, it may be added, the coarsest specimen of its kind in the museum. To the credit of the Indian artificer, however, it may be stated that his work is still incomplete—scarcely more than blocked out, in fact, but none the less valuable on that account. It is five and a quarter inches long, and of Huronian slate. The base is almost in its rough state, and no attempt has been made to bore the fore and aft holes that are almost invariably found in specimens of this type. In the Dr. Tweeddale collection; from White's Mills, county of Elgin.

#### STONE CARVING.

FIG. 109. (Full Size).

The specimen of which figure 109 is a cut was presented by Mr. J. W. Fitzgerald of Parry Sound. The material is gypsum, of a light pink color. According to the best of Mr. Fitzgerald's recollection it was found near Lindsay. The carving is fairly good. Behind the figure a beginning has been made on each side in boring a hole through the piece.
