

CANADIAN MINING JOURNAL

Vol. XLI.

Gardenvale, P. Q., July 16, 1920.

No. 28.

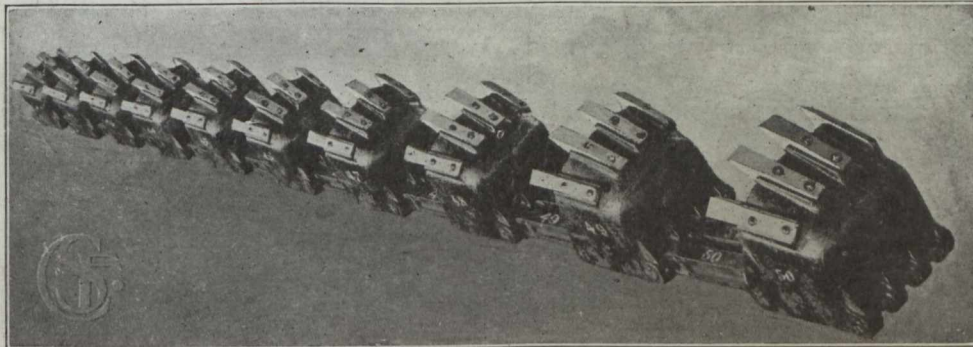

If You have not already done so, try

MANGANESE-STEEL

when making those renewals. You will then discover why it is

THE TRULY ECONOMICAL MATERIAL

where durability and resistance to wear are of importance. Though it costs more than the other material, it will still be in good condition when that other material (had You used it again) would be fit only for scrap. You will thus also avoid the trouble and expense entailed by another interruption for renewals.

Dredge Buckets fitted with our Manganese-Steel Teeth
