#### THE CRISIS.

The Opposition has held out the week without any sign of or in physique.

There is no longer a doubt that it is in a position to pre- activit yand complication. We are invent the passage of the naval formed, for example, that an atom of bill without violating the rules hydrogen, weak and inert, consists of of order.

ment will now give up the attempt to force the bill through and will try first to gag the members by closure.

How is this to be carried any more easily than the naval bill itself?

To be regular it must be shaped as a bill and put through committee. If there were any rule to limit members in committee to one speech on the question, it would be a different matter. But there is no warrant for cutting off discussion in committee.

and arbitrarily closing debate can the Government carry a the right to close it, why seek our religion. to obtain the right? Why not close the naval debate itself science in actually creating "matter" without delaying to bring in and out of what seems just energy sugpass a closure bill?

told by good authority that "the subject who is truly loyal to the Chief Magistrate will neither advise nor submit to arbitrary measures." The Opposition will show which is the loyal party in this country when it resists any attempt of the Government to over-ride the privileges of Parliament.

In view of the Government's refusal to carry out its own pledges and submit its policy to the day of steam and water power will the people, the Opposition is dwindle to nothing when the greater justified in its present course. The Government is attempting science. a political revolution, and is assaulting the basic principles of self-government. If to this it adds an illegal breach of parliamentary procedure, there will be a state of war, at the least an intolerable crisis.

The Opposition may have to refuse to abide by the ruling of a Speaker who is a tool of tyranny. It will have every right to resist an illegal ejection from the House. A closure of debate will have to be constitutionally brought about, or not eat all.

# CANADA'S BROKEN PLEDGE.

Senator Pearce, Australian Minister of Defence, reproaches Canada for betraval of the Commonwealth. In a recent speech he recited the understanding reached by the three selfgoverning colonies with the Pacific seaboards-Canada, Australia and New Zealand-at the Imperial Conference in 1909. Australia has kept faith, has gone ahead, and is rapidly completing her fleet unit, but the Borden Government has abandoned the Canadian naval policy. New Zealand has compromised by contributing a Dreadnought to the Admiralty, in return for certain smaller ships to be sent to New Zealand by the Admiralty, the Dreadnought also to be sent there on

Senator Pearce makes it plain that the scheme of co-operation agreed upon in 1909 originated with the Admiralty; nor has the Admiralty changed its mind. Senator Pearce prove on that. adds:

"Having reached this position, the Australian Government is of opinion their way to come to an agreement contribute three cheers. as to the defence of British interests

in the Pacific." Australia only by mending her broken operative in Ontario generally it would pledge and establishing a squadron in obviate the necessity of Mr. Rowell's Pacific waters. The logic of circum- abolish the bar platform. The Adver-

Laurier policy, which is the Australian policy. It is the truly Imperial policy; Canada will return to it when she gets the opportunity.

#### SIR WILLIAM RAMSAY'S DIS-COVERY.

A wonderful scientific achievement is that lately made by Sir William Ramsay, Dr. Collie and Mr. Patterson. Passing an electrical discharge from a vacuum tube through pure hydrogen, they found after a time considerable traces of helium and neon, two gases mixed with the hydrogen. Their conclusion is that either (1) transmutation of hydrogen or of one of the elements of the vacuum tube took place, or (2) the two gases were directly generated by the electric charge

The latter supposition is not surprising to those who have kept track of the recent developments in physical theory. For some time it has been held by physicists that the elementary exhaustion either in argument atom is itself a complex of electrical units, negative and, positive, called electrons. That is, matter is itself esactivity and complication. We are in-700 electrons, an atom of radium, strong and active, of 160,000. What the It is hinted that the Govern- British scientists have done is to demonstrate this theory that the various elements of matter are so many forms of electrical energy. Whether the helium and neon they generated were the direct transformation of the electrical current or built up from hydrogen by the addition of more electric force to atoms poor in electrons, the theory is to some extent established.

Already scientists have decided that the elements, being reducible to electrons, must be rather degrees of energy than distinct forms. Some transmutation of elements had been made, ilies, in which the elements are so many terms linked each to each like the orders of plant and animal life. This get along fine. latest experiment makes it all the clearer that, as metaphysicians have discovered, and as the old Greek Only by over-riding the rules physicists held, there is a one universal and primordial something in which all created nature consists. The troublesome opposition of matter to spirit closure law. If the Government may disappear in some common unity. can close debate in order to get Dualism may be abolished from even

But not to drift into a consideration of results to philosophy, the success of gests a far-reaching discovery of new sources of power. When a physicist But arbitrary measures will coagulates energy into matter, what he not be tolerated. We have been does is to start little systems of force. gives artificial relief from cravings judge to take the evidence tendered duced the original returns of Deputy he electrons of an atom revolve and rotate with reference to one another, so it is believed, as systematically as the polar systems of space.

The complicated power of such in the mass. If science can build these little worlds of force, let it only unbuild them, translate their concentrated motions into power for human intra-atomic energy, incomparably greater than any which we derive from fuel or waterfalls, will become available. The world will be revolutionized by such an invention. Our littime comes, in which the elements and their atoms will be at the mercy of

# MR. BECK'S BACKDOWN.

The Mayor of Stratford has received a letter from Hon. Adam Beck, in regard to the project of publicly-owned electric railways throughout On-

"Various municipalities are urging this matter. However, at this time I am not in a position to give you any information regarding the same, the Government not having come to any conclusion in so far as they are concerned."

This is contrary to the impression Mr. Beck has given by his public advocacy of the scheme. It could only be inferred that he spoke for the Government. The Conservative press has assumed as much and has been showering Mr. Beck and the Government with praise. Until Sir James Whitney the other day threw cold water on the plan, the municipalities had every reason to believe it had taken definite shape. They have been misled by Mr. Beck. He had no right to take the lead in the movement when the cabinet had framed no policy, and when the Premier was actually hostile. The irregularity of his conduct has apparently been impressed upon him by his chieftain, for Mr. Beck now backs

Co-operation, not contribution,

Australia rightly regards the present Canadian Government as a backslider.

The Ottawa Opposition wants an election; the Ottawa Government doesn't. Who's afraid?

The Ottawa Citizen says that Laurier is trying to "sacrifice the young life of Canada to the maw of militarized The things that bludgeoned us in the greed." Mr. Bourassa couldn't im-
