CAMERON & GRAHAM OPPOSITE HOWDENS' GROCERY

Paddy At Copenhagen

Exchange
The Irish seem to be the only people The Irish seem to be the only people who can inject an element of humor into this grim war. Two wounded Irish troopers rode into Paris the other day on a train and said the last they knew they had been "fightin" like the divvle at Copenhagen." Perhaps this was their Tipperary way of saying "Compeigne." We were fightin' for a weak or more, an' fightin' night an' day.

an' fightin' night an' day.
The boys were all around us till the Ger

mans ran away.

It was a glorious ruction—sure we tuk to it like play—
Till we found ourselves alone at Copen

hagen! We wor mighty glad, I tell ye, when we got the word "Advance,"
We kep' right or through Belgium to
dhrive em out of France;

The Dutch were sure cantankerous-they led us quite a dance— Till we found ourselves marooned at Copenhagen!

Twas a long way to Tipp'rary-och, a weary road from there weary road from there—
Our nags bein' shot from under us, we
travelled on shank's mare,
Then we tuk the thram to Paris—never

paid a blessed fare-For they knew that we were just from Copenhagen!

They're feedin' us on strawberries, an' her, an' champagne. We're feelin' just like fightin'-cocks or ducks in heavy rain;

A week o'this would kill us-so good-bye

Paree again, We'll go back to fight the Dutch at Cop enhagen!

Nothing as Good for Asthma. Asthma Nothing as Good for Asthma. Asthma remedies come and go but every year the sales of the original Dr. J. D. Kellogg Asthma Remedy grow greater and greater. No further evidence could be asked of its remarkable ment. It relieves. It is always of the same unvarying quality which the sufferer from asthma learns to know. Do not suffer another attack, but get this splendid remedy to-day. get this splendid remedy to-day.

Upon an inquiry from members of the Upon an inquiry from members of the board of education as to the reason St. Thomas students made such a poor showing at the recent departmental examinations, Principal Voaden came out frankly. He attributed the failure of so many matriculation and Normal School pupils to "social attractions," which, he said, were on the increase and proved a to "secial attractions," which, he said, were on the increase, and proved a barrier to the students' progress. Another cause he attributed to "girls and cigarettes," stating that it seemed a Herculean task tor some students to get down to work with so many attractions taking their attention.

An Oil That is Famous. -Though Can-An Oil That is Famous.—Though Canada was not the birth-place of Dr. Thomas' Eclectric Oil, it is the home of that
famous compound. From here its good
name was spread to Central and South
America, the West Indies, Australia and
New Zealand. That is far afield enough
to attest its excellence, for in all these
countries it is on sale and in demand. m

countries it is on sale and in demand. Frank Redmond, aged 18, who resides Frank Redmond, aged 18, who resides mile from Oil Spring, was shot through the leg by a rifle Thursday as he was climbing over a fence while out rabbit hunting. He is now in Petrolea hospital. It is not believed that the injury will prove serious. He was out shooting with Jack Wilson, who helped him to a doctor.

Mae Little, aged 11 years, was instantly killed at Essex Sunday afternoon by being struck on the head with a pole. The child was playing on a swing in front of her grandmother's home, with whom she resided, when the pole supporting the swing gave way. It struck the girl with considerable force and she died instantly. The child was an orphan.

Made More Striking by White Garden Ornaments.

ITALIAN MARBLES IMITATED.

Benches, Vases, Flower Boxes, Sundials and Fountains Reproduced In Artistic Style-White Enamels Are Used For Arbor Furnishings.

Garden accessories are so much in demand that inexpensive reproductions of many of the costly marble and carved stone pieces of Italian and Japanese gardens are to be had. Garden benches, sundials, fountains for birds and for ornamental purposes, bird houses, jardinieres, flower boxes and vases for trailing vines may be bought at reasonable prices where garden sup-plies are sold. They come variously made of stone, terra cotta, concrete and wood. They add greatly to the artistic finish of any garden.

The ordinary flowerpots are lovely made of terra cotta. The color of this material harmonizes so beautifully with the green foliage of the plants

GARDEN FURNISHINGS

These pots are so ornamental that there is no necessity for a jardiniere. They have been planned with the idea of combining strength and durability with artistic effect. They are quite inexpensive.

Porch boxes and window boxes are beautiful when made of terra cotta. One beautiful specimen is entirely plain, excepting for a border of Roman medallions along the sides.

The ever popular sundial is now made of terra cotta, and this brings such an ornament within the reach of all, even those of us with most limited means. There is something about a sundial that appeals to one. We can always tell the passing of the seasons by the appearance of our trees or flowers, but the sundial goes further and marks the passing of the hours. It is surrounded with an atmosphere of romance that always appeals to

even the most prosaic of us. A fountain of any kind will attract the birds. There is no surer way of colonizing them than by providing a fountain where they may bathe and drink. Birds supply much without which even the most beautiful and romantic of gardens is hardly complete.

The picture in this column shows the little fountain on the lawn, whose fine spray cools the afternoon. Ranged around it are the white enameled garden chairs and the curved settee. Below it are shown two terra cotta sundials. The arbor, of circular shape, finished with white enamel to match the chairs and settee, may be covered with flowering vines. It makes a delightful corner in which to lounge, read or serve afternoon tea.

Invalid's Plates.

Invalid plates, or baby plates, as they are also called, are a convenience in the household where there is a small child that eats slowly or an invalid whose meals must be carried from the dining room. They make use of the vacuum method of keeping things hot. Each consists of a metal frame about as deep as a shallow soup plate, into which hot water is poured through a

small opening with a screw top. In the top of this metal frame is fitted a china plate, on which the food is put. The hot water under it keeps the

plate hot, and presumably the food on it keeps hot too. This would be a delightful gift to an invalid, for its very novelty makes it interesting.

Hemp Hats. A hat for general wear is made of black hemp braid on a flat brimmed frame, having a round crown, which ts

covered with a gay Roman silk, with a fan shaped plaiting of the silk at one side. A hat of blue hemp has a crown and frill of blue and white picot ribbon in a floral design.

Live Stock Need Salt. Keep pieces of rock salt on hand at the feeding places of all stock so the animals may get a taste of it when-ever they like. All stock need sait oc-easionally and are benefited by it. It promotes appetite and digestion, and tends to expel worms.

The Hog Herd.

Uniformity in a herd is the surest index of the worth of the stock and the skill of the breeder. A uniform lot of pigs well fed look better when fattened and command a higher price on the market than a mixed lot.

TROGLODYTES OF TRIPOLI.

They Live Underground, Some of Them Never Seeing Daylight.

In the region of Gharian, in the hinterland of Tripoli, there is an invisi-ble town with 7,000 inhabitants. This city of the Troglodytes was visited by Miss Ethel Braun and is described by her in her book, "The New Tripoli." This city is excavated out of rock

and earth. Its inhabitants live under ground, some of them never coming to the surface. "The richer ones," writes Miss Braun, "are born in these dim dwellings, never leaving them until they are carried out to be buried." The rich families have, however, one recep tion room over the ground at a height of six or seven feet.

Describing the Troglodyte prison Miss Braun tells of an Italian lady's experience while visiting the female prisoners.

"They had never seen a European woman before and asked her to take off her hat. No sooner had she done so that in a twinkling all her hairpins were pulled out, to be kept as souvenirs by the women, who looked upon them as most precious mementos."

The friendly Troglodytes made Arab tea for Miss Braun. "shai, as it is called, made with powdered tea and much, very much, sugar, so that it tastes just like a sirup," and they were very excited at the event of her

WORLD'S POULTRY CON-GRESS.

The poultry industry is rapidly perfecting its organizations and assuming the proportions of one of our greatest international industries. The call for the first world's poultry congress, to be held at The Hague in 1916, has been received with almost unanimously enthusiastic approval. The location of this conference is not so much out of the way as might appear to those who are unfamiliar with the Dutch poultry industry. Of late years great improvements have been made in that country, and some problems of worldwide interest are being worked out. In some respects the keeping of fowls is very highly developed there, and Holland comes near being the geographical center of the European poultry industry. All sides of the business will be treated at the congress-breeding, production, hygiene, research and commerce in poultry products.

The recent growth of interest in European bred fowls due to the winnings of English hens in American laying contests has impressed American poultrymen with the fact that we have something to learn from England, continental Europe and even far Australia.-Country Gentleman.

CONCRETE ON THE FARM.

Used For Barns, Silos, Henhouses, Bridges and Cellars.

Not long ago the farmer hardly knew what concrete was. Now he builds barns, silos, henhouses, bridges and

Where some years ago the farmer used a pile of old boards, a saw and a hammer to build his hen coop, his gate post and his water trough, he usually now takes part of a bag of cement,

mixes it with sand and gravel and adapts concrete to his purpos

Today he has many appliances about the farm that are neat, that are sanitary and that last forever. This change started with silos and fence posts, and there is no end to the uses to which the handy man about the house can put the versatile machine. Out on a farm in Illinois, where an acetyline generator supplies gaslight to the farmhouse, one man built a sort of cyclone cellar for the plant. Owing to the danger of explosions, the ordinary cautious citizen no longer cares to put a gas plant in the basement of his residence, but if this generator should explode it probably would not even shat-ter the walls of the little concrete house that contains it.

Fresh water is supplied to the chick-ens on another farm with the aid of a concrete pool. It is long and wide and so shallow that ducks and geese do not try to swim in it. A pump at one side supplies it with fresh water. This same flock of fortunate chickens has a solid concrete house of two rooms; one room has a concrete floor and perches for the convenience of its occupants, and the other room has a floor of earth, where the chickens can scratch about in the winter time. The roosting room, with the concrete floor, can be flushed out and kept perfectly sanitary, the water running from it to a waste outlet at one side.

When it comes to drainage on the farm concrete steps in and helps out the farmer. Culverts are now being made in sections so that, after the ex-cavation is made and a solid concrete foundation put in the sides and the arch can be added later.

The silo, the first appliance to adapt itself to concrete, has grown enormous ly in size. One of the biggest of them is sixty-two feet high and has walls that are eight inches thick. It will hold enough ensilage to fatten five carloads of beef cattle. It only took a month to built it and its total cost was but \$600. This is the latest type of silo, built tall, and with a small diameter, because in this way the room is used more economically. * * The smaller the diameter the less waste there is in proportion.

WATER HORSES OFTEN.

During the Hot Summer Season Horses Should Have Plenty to Drink. In these hot summer days men nev

er think of going to their work without taking a-plenty of drinking water. And they have very little to fear from heat so long as they perspire freely and by drinking often keep up perspiration. But while providing for their own comfort and necessity very few ever give a thought to the fact that their horses when working in the hot sun perspire as copiously, and even more so, than the driver and need water fully as much. It is but very little trouble to have a barrel or a tank on a log boat or sled, and when going to the field take it along with a pail in it, and two or three times in a half day rive each horse a drink In fact, the horse should have a drink as often as the driver. He will appreciate it fully as much. This is but very little trouble, as the water can be drawn along the headland, and when stopping to rest the collars should be raised from the shoulders and the horse given a sip of water. When this is done when the team is put into the stable at noon they are ready to be grain fed, and the trouble of taking out to water after standing to cool off is obviated. The team very quickly will learn to indicate to the driver when they want a drink. A merciful man is merciful to his beast. He certainly ought to be kind to one of his most faithful friends. -National Stockman and Farmer,

****** NATURE BOOKS.

In furnishing the country house "nature books" should not be forgotten. On a beautiful night the stars force themselves on the attention of the most careless and unromantic, and it is pleasing to find near at hand a little book giving some simple information about astronomy.

Again, when the garden is full of flowers with which others are familiar, how convenient for the ignorant guests to find a simple little text book on botany lying on the veranda table. A book about birds is indispensable, for nearly every one now wants to know the birds better.

Miller's Worm Powders are sweet and palatable to children, who show no hes itancy in taking them. They will cer-tainly bring all worm troubles to an end. They are a strengthening and stimulat-ing medicine, correcting the disorders of digestion that the worms cause and imparting a healthy tone to the system most beneficial to development. m

A prick of a hat pin, suffered many years ago, finally caused the death of Miss Ella P. North, Windsor. The injury happened when she was a small child, and efforts of specialists in all parts of the country failed to give her relief from a growth on her head which followed. followed.

Doing Their Part

In all ages and all nations women have displayed a devotion to country and a spirit of self-sacrifice fully equal to that of men. In many instances their sacrifices and suffering are greater. While the minds of their husbands, sons and brothers are concentrated on the excitements of war, the dull drudgery of caring for and supporting the helpless ones left in their charge and worry and anxiety over the fate of loved ones in the battlefield is their portion. The women of the present day measure up to the standard of their sisters of the past.

While the peasant women of Europe are laboring in the fields, the women of the upper classes are not idle. There are scores of organizations for women to ameliorate conditions produced by the war, and royalty, nobility and gentry are enrolled.

In Britain, France and the other countries at war, the trivialities of social life have given place to deeds The of mercy, and even heroism. frivolities of feminine life are abandoned for the more serious work of devotion to humanity. The horrors of a great war are softened by the devotion of these ministering angels.

Death of Dr. J. I. Wiley

Dresden, Oct. 14.—Dr. John Irvine-Wiley, aged 48, died at his home here this afternoon after an illness extending over the past three years with pernicious anaemia. He had been in a critical conover the past three years with pernicious anaemia. He had been in a critical condition for the past three weeks. He was born in the Township of Adelaide, being educated at Strathroy high school. In 1889 he graduated from Trinity Medical College, Tomonto, as gold medallist. The following year he was married to Jeanette D. Williams, of Forest. He practiced with Dr. Bullis for five years before Dr. Bullis went to Rochester, and then had as partner his brother, Dr. W. D. Wiley, who later went to Brantford.

Deceased was very prominent in Dresden's public affairs, having been mayor in 1906, and a member of the school board for six years. He was chairman of the board of managers of the Presbyterian church and was an Oddfellow, Forester, Maccabee, and a past district deputy grand master of the Masons.

He was an enthusiastic bowler, and for years was president and secretary of the local club. He won many trophies at big tournaments.

Dr. Wiley was one of the leading Lib-

the local club. He won many trophies at big tournaments.

Dr. Wiley was one of the leading Liberals of the county and at the time of his death was president of the East Kent Reform Association. He had many times been tendered the nomination, but always refused on account of his professional duties.

sional duties.

Besides his wife he leaves two sons and

Besides his wife he leaves two sons and three daughters, Irvine, of the London Medical College; Madge, of the Faculty of Education, Toronto; Grant, Gertrude and Mary at home. His parents, Mr. and Mrs. John Wiley, of Watford; and four brothers, Dr. W. D., of Brantford; Dr. F. C., of Pinnebog, Michigan, Archie, of Watford; James, of Warwick.

Canadian Troops in England

As an explanation of the report two weeks ago that the Canadian contingent had landed at Southampton, it is-stated that the arrival of transports with return-ing British reservists, were mistaken for the Canadians. The real Canadians have turned up at Plymouth, and are said to be booked for training at Salisbury. This cancels the hope that many had that they would at once be employed in active serwould at once be employed in active service in Belgium or France. At the same time, it reassures those who fancied the British were so hard up for me'n that they were sending every available regiment to the front. The greatest care is evidently being given by the military authorities in England to ensuring the efficiency of the men, and this is not only good for the men themselves, but good for the cause to which they are commit-

The Canadian Pacific Kailway Company has offered a scholarship giving four years' free tuition to McGill Univer-sity Faculty of Applied Science to ap-prentices and others on the staff of the company and to employees' sons.

It would shock our grandmothers to know that bread can now be baked by electricity. The current loaves are said to be especially nourishing.

The tomato red coats and sky-blue skirts now in vogue are enough to turn the head of the most sedate citizen.

BORN.

In Forest, on Sunday, Oct. 4th, to Rev. and Mrs. Cannon, a daughter. In Winnipeg, Man., on Tuesday, Sept. 29th, 1914, to Rev. and Mrs. D. S. Hamilton, a son, Donald Walker.

DIED.

In Plympton, on Sunday, Oct. 4th, Archibald Taylor, aged 53 years. In Warwick, on Saturday, Oct. 3rd, Ruth, infant daughter of Mr. and Mrs. Ernest Shepherd, aged 2 months. In Bosanquet, on Sunday, Oct. 4th, Mr. Hugh Bell, in his 57th year.

No child should be allowed to suffer an hour from worms when prompt relief can be got in a simple but strong remedy.
