PROBLEMES DE RECAPITULATION SUR LES QUATRE REGLES

1. Une caisse de marchandises pèse brut 321 livres; la caisse seule pèse 28 livres, quelle est le poids de la marchandise et quelle est sa valeur à \$0.78 la livre?

Solution: $321 - 28 = 293$ livres, poids de la marchandise. *Rép.*
 $\$0.78 \times 293 = \228.54 .

2. On présente à un négociant, pour marchandises qui lui ont été fournies, une facture de \$346.75, sur laquelle on lui fait une remise \$0.20 par piastre; il paye avec un billet de \$500, combien lui rendra-t-on?
