

A NEW METHOD OF POSOLOGY

DIURNULES AND DIURNAL TABLET TRITURATES.

M. EDUARD TROUETTE recently presented to the Paris Academy of Medicine a new method of administering Toxic Drugs that is very practical and seems destined to succeed the older ones.

This new method consists of the division of the maximum internal dose that can be given to an adult in twenty-four hours, in twelve Diurnules or Diurnal Tablet Triturates.

In anticipation of the popularity of this method we have prepared Diurnules and Diurnal Tablet Triturates of many toxic medicaments, a list of which will be sent on application.

The Diurnules are put up in bottles of 100 and 500 and the Diurnal Tablet Triturates in bottles of 100, 500, and 1000. In addition to these a leather pocket case of the Diurnules, containing ten vials, will be furnished for the convenience of physicians.

The Tablet Triturates are so made by stamping them by cross lines that division is readily possible into two or four parts. They may be powdered or dissolved in water.

With this method accidental poisoning need no longer be feared. Toxic medicaments may be given in efficient doses to adults and children without the least risk.

Full information concerning this method, with reprints of Dr. Trouette's article, furnished physicians on request.
