

PEPTOGENIC MILK POWDER

The one and only means of modifying Cows' Milk to a correspondence with Mothers' Milk.

FORMULA :

Peptogenic Milk Powder,	-	one measure.
Water,	- - - - -	one-half pint.
Milk,	- - - - -	one-half pint.
Cream,	- - - - -	four tablespoonfuls.

Mix and heat until it comes to boiling point in ten minutes.

RESULT :

Water,	Fat,	Milk Sugar,	Albuminoids,	Ash,
86.2	4.5	7.	2.	0.3

The average analysis of normal mothers' milk is :—Water 86.73 ; Fat, 4.13 ; Milk Sugar, 6.94 ; Albuminoids, 2 ; Ash, 0.2.

By this simple method, the caseine of cows' milk is brought to the soluble condition characteristic of the peptone-like albuminoids of mothers' milk, and the chemical composition of the milk modified to a very close approximation to average human milk in every detail.

Cows' milk, prepared with the Peptogenic Milk Powder, is just as digestible as mothers' milk ; it does not make the milk unnaturally easy of digestion.

This method is the best achievement of science as applied to infant feeding, and is just as simple and as easy for use as the most empirical so-called " infant food " of the shops.

Sample and Pamphlet upon request.
